

An aerial photograph of a small, rocky island in the middle of a body of water. On the island, there is a small hut with a bright red roof, surrounded by green trees and shrubs. The water around the island is clear, revealing a sandy and rocky seabed. In the upper left portion of the image, the words "WHAT IF" are written in large, three-dimensional, stone-like letters that appear to be submerged in the water. The overall color palette is dominated by the blues and greens of the water and vegetation, with the red roof providing a strong contrast.

WHAT IF

WHAT IF EXPLORING SPACE WAS VITAL TO PRESERVING EARTH?

Continuous monitoring can help protect our oceans and rainforests. Intelligent beam forming can bring connectivity to the most remote places on the planet. ADI's innovations in the technology of space are the same breakthroughs that will ultimately help the people of Earth.

Analog Devices. Where what if becomes what is.
