

es on GPU computing can carry out two independent operations with a single instruction. Automotive applications use the FalKon manycore FPGA, and AI/ML applications use the Tez manycore FPGA.

Dr Holimath returned to India in 2014 after working as a research and development engineer at the National Institute of Informatics, Tokyo. He was always fascinated with computer architecture, so he started working with Prof. John Gustafson. After almost ten years of research and development, they introduced the novel architecture of high-end computing using the POSIT number system.

VividSparks has a unique marketing strategy that allows it to sell their services on a subscription basis. The customers do not need any infrastructure as the whole system of VividSparks is cloud based. They charge end customers per subscription, either monthly or yearly.

L to R: Dr Vijay Holimath (President and CEO), Shinobu Akahori (VP of IP), and Spencer Simons (VP of Sales and Marketing), of VividSparks

VividSparks aims to build customers from all over the world. The company carries out all its research and development in India. However, VividSparks engineers work from locations such as Marid, Tokyo, Paris, and Washington.

VividSparks closely works with government institutes in India. It has also partnered with silicon partners to deliver VividSparks based systems on chips (SoCs) with EDA tool partners to integrate arithmetic libraries implemented by

VividSparks in their tools, with distributors and agents globally to give access to their technology all over the world, and with hardware/board developers to enhance the development of new SoC designs.

“We believe technology has to be novel and not expensive. And novel technology should be accessible and affordable for everyone,” says Dr Holimath. The goal of VividSparks is to deliver high performance with minimum power consumption.

2 INDIA'S OWN AI POWERED SECURITY SYSTEM

Xellier Networks, pronounced as ZAY-llier, is an India based company that aims to provide intelligent security systems for homes and small businesses

When we think of security, we think of CCTV cameras across a space and maybe a room with a bunch of TV screens and a guy navigating across those screens to identify anything suspicious. This has been the case for a long time, but with the advancement of technology, there comes a change in demand as well

Epic Cam by Inxense is a complete security package offering AI based security cameras and delivering remote view of user's property on the remote device without any storage issues (Credit: Xellier Networks)
