CSoT acquires all of Samsung Display's LCD patents

After Samsung Display announced its exit from the LCD market, all of its patents have been sold to TCL's manufacturing arm, China Star Optoelectronics Technology (CSoT). CSoT would be elevated to being one of the world's largest manufacturers of LCD panels, especially after this acquisition of more than 2000+ patents related to LCD technology from Samsung Display. This shift in power has taken TCL to the forefront of LCD TV development.

Volvo commences production of heavy-duty electric trucks

Volvo FH, Volvo FM, and Volvo FMX have been added to the series production of Volvo trucks globally, representing around

66% of company sales. These heavy-duty trucks can operate at a total weight of 44 tonnes. Following the production in Sweden, the factory in Ghent, Belgium would be producing electric trucks on the same line as its conventional trucks. The batteries for these trucks are supplied from the company's battery assembly plant in Ghent.

Monta to expand in the US with freshly secured €30 million

EV charging platform Monta recently raised €30 million from Energize Ventures, taking its total investment into the platform to over €50 million. As per reports, the Europe based company stands at a €155 million valuation. With the recent investment, it aims to expand into the US market. The EV infrastructure company hopes to make mass-market EV adoption easier by building charging solutions.

Newly funded TeraWatt all set to bolster commercial EV charging

After a successful \$100 million seed round from Keyframe Capital and Cyrus Capital, TeraWatt Infrastructure grabbed around \$1 billion in Series A round funding. Along with both the above-mentioned investors, Vision Ridge Partners also participated in the current funding round. Though the infrastructure for charging private passenger EVs is becoming consistently accessible,

TeraWatt justifies its existence by the fact that with more electric vehicle models for fleets entering the market, the commercial sector needs its own charging centres too.

US senator invites Indian EV industrialists to start business in USA

Jon Ossoff, a senator from Georgia in the US, recently engaged with the Indian EV industrialists in Mumbai. On a week-long trip to India, Ossoff invited these companies to bring their businesses to the United States and open EV and renewable battery production facilities. In addition to discussing the investment opportunities with business leaders in the field of renewables, the senator also put forward his intention to deepen the commercial ties in the energy sector. He emphasised on the fact that Georgia is highest in the production of renewable energy.

Snow Lake Lithium to produce enough lithium to power 5 million EVs

Ideally located to serve the North American automotive industry, Snow Lake Resources Ltd is expected to produce enough lithium to power around 5 million EVs for the next ten years in the North American market. Equivalent to around 500,000 electric vehicles per year, the company planned an all-electric lithium mine, which is perfectly placed to enable this domestic supply.

US cities Phoenix and Austin to welcome cruise robotaxis soon

The self-driving Co Cruise, a subsidiary of General Motors, recently announced its plan to bring robotaxis to the US cities of Phoenix (Arizona) and Austin (Texas). The CEO of the company, Kyle Vogt said that the small-scale driverless operations will be live by the end of this year itself, while the revenue generating and scaled operations will follow next year. In Phoenix, the company conducted a pilot project with Walmart to deliver customers' purchases through a self-driving car.

RS Group consolidates its businesses into a single, RS Integrated Supply

RS Group plc has announced the consolidation of its global maintenance, repair, and operations (MRO) supply-chain solutions businesses into a single brand, RS Integrated Supply. This transition to one strong unified RS identity would deliver global efficiency, sustainable value, and scalability to stakeholders.

Spotflock signs MoU with INCOIS

As per a recent MoU signed between a deep tech company Spotflock Technologies and Indian National Center for Ocean Information Services (INCOIS), deep technology will be utilised to promote ocean information and advisory services. It must be noted that deep-tech tools like data pre-processing tools, data visualisations, business intelligence, AI-ML, natural language processing, computer vision, Blockchain, and IoT are used world-over to increase accuracy in forecasting outcomes.

two-wheelers. They are accessible through the Shell Recharge India app, which helps in locating the nearest available charger, choosing a desirable charging method (by unit, time, or by percentage), checking real-time charging status, and making hassle-free payments.

Hero MotoCorp ready to enter the EV market

Hero MotoCorp has announced the launch of its first model of electric vehicle in the domestic market. The two-wheeler maker said that "a new era in mobility is about to begin"

alluding to an event under its Vida brand on 7th October. Invites have been sent to dealers, investors, and global distributors for the event. The company would launch its first EV product and emerging mobility solutions under the Vida brand in Jaipur, Rajasthan.
