

Segula Technologies to recruit 500 engineers for EV development

As the EV market continues to grow, Segula Technologies recently opened a new office in Pune, after its expansion in Chennai. The office at Pune will focus on the development of embedded software. The company currently has more than 700 employees in Chennai, Delhi, and Pune, and is looking to recruit 500 engineers. The job responsibilities vary from software and embedded systems, mechanical plastic engineering, and process engineering to manufacturing and data analytics.

Su-vastika receives patent for its emergency rescue device

Su-vastika recently received a patent from the India Patent Office for its IoT based emergency rescue device called EQ MAG PRO. This device has been touted as a first-of-its-kind, providing power backup for critical machines, including elevators. It provides jerk-free operations during outages to avoid panic situations, especially when people are stuck inside the elevator during a power cut. The EQ MAG PRO doesn't require a generator as it is equipped with 15 minutes to 10 hours of power backup. The company is looking for partners for licensing across India and abroad.

Mahindra Electric signs MoU with Amplus Solar

Significant to Amplus Solar's mission to advance clean mobility solutions, Mahindra Electric has signed an MoU to procure Zor Grand, one of India's most technologically advanced, low-carbon, three-wheeled small commercial vehicles, built for sustainable and intelligent transportation. Amplus Solar would now offer freight delivery to major e-commerce, on-demand logistics, and other enterprises in the country on various subscription models, as the agreement is a step forward in the mission to advance clean mobility solutions.

Anyline and Tata Power-DDL partner to ensure 100% accuracy in meter reading

Tata Power Delhi Distribution Limited (Tata Power-DDL) has partnered with Anyline for meter reading. Using the industry-first optical

character recognition technology, non-technical losses are reduced for field workers. Field workers can now instantly capture meter readings by combining mobile data capture and AI-powered anti-spoofing capabilities. This solution is integrated into the mobile devices of field workers to gather meter readings. The readings are verified by Tata Power-DDL to detect whether the data and images submitted are genuine and accurate.

Audi India installs over 100 EV chargers in major cities

In a recent announcement, Audi India said that it has installed over 100 chargers for EVs across major cities in the country. In addition to all Audi India dealerships, the chargers have been successfully set up at select Skoda and Volkswagen showrooms and workshop facilities in India. A 22kW charger has been installed at every Audi authorised dealer outlet. Also, 16 Audi showrooms in metro cities are equipped with a 50kW DC fast charger.

Serentica plans hybrid renewable projects across India

Serentica Renewables plans to install over 1500 MW of renewable energy projects. The company announced the launch of a renewable energy platform, which will provide round-

the-clock carbon-free power to large energy consumers in India. It also expects to commission the projects within two years and has already acquired connectivity approvals in a few states. It has been learnt that around 600 MW of renewable power produced would be supplied to different entities of the Vedanta Group.

Nxtra first Indian data centre company to deploy fuel cell tech

Adding to the renewable energy installations, Nxtra would be the first data centre company in India to deploy fuel cell technology. Located in Karnataka, this unit is aimed to start on non-combusted natural gas before switching to 50% hydrogen in future. The primary usage of natural gas-powered cells is for power generation with utility electrical grids and generators as backup sources. The supply of much cleaner energy would lead to a significant reduction in carbon emissions. Nxtra plans to start the unit without any significant investment.

Arctech Solar expands with a 3GW annual production facility

Jash Energy, Arctech's first joint venture manufacturing base in India, has reached the 3.5GW shipment milestone in the regional market. This factory covers over 16 acres in

Mundra, Gujarat and is modelled after Arctech's existing Chinese manufacturing base. According to Wood Mackenzie Power & Renewables, Arctech holds the No. 1 position for solar trackers in India in 2020 and a 45% market share in 2021.
