

PARTICIPATION IN CONTESTS

I have read the article on wireless charger from the contest winner. I also want to contribute electronics-related content. Please let me know how I can participate in EFY's and other electronics design-related contests?

Raman

EFY. Glad you asked. To participate in EFY's future contests and get updates about all electronics design-related contests, please check <https://www.electronicsforu.com/category/news/tech-contests>

DIY VIDEOS

Recently I saw the entire working and explanation video of a DIY energy harvesting remote article published in EFY. Does EFY provide such detailed explanation webinars for all DIY projects? If yes, where can I see those videos for the rest of DIY articles?

Pravesh

EFY. The live videos and webinars for DIY articles are provided so that readers can clear their doubts in a live session and learn and understand the circuits better. You can visit <https://www.electronicsforu.com/efy-diy-training> to check all previous webinars and upcoming webinars of DIY articles published in EFY magazine.

LED SCROLLING DISPLAY

This is regarding the DIY article 'LED Dot Matrix Scrolling Display Using STM32 Controller' published in September issue of EFY. I have STM32F103C6T6 as well as STM32F103C8T6 controller boards. Please suggest which of these STM32 boards is better and what is difference between these two boards? They are priced differently. Are they good enough for installing the Arduino IDE software? Should we include the library also?

Alan Alappatt

The author of the article Pamarthi Kanakaraja replies:

First of all, the complete specification differences of both the controllers can be found in the link <https://chowdera.com/2022/04/202204072019131653.html>. The major difference is mentioned below.

Specifications	STM32F103C6T6	STM32F103C8T6
FLASH	32K	64K
RAM	10K	20K
USART	USART1/2	USART1/2/3
SPI	SPI1	SPI1/2
IIC	IIC1	IIC1/2
TIMER	TIMER1/2/3	TIMER1/2/3/4

Except this, remaining all properties are the same.

In our project I used the STM-32F103C8T6 (72MHz) controller. If you want more details, please check the above link.

Yes, for uploading the code, Arduino IDE can be used. There is no change in the uploading procedure, except you select the right board in the selection menu. Library details are available in the article. There is no need to change code. Both the controllers execute code without error.

WIRELESS PROSTHETIC HAND

This is regarding the DIY article 'Wireless EMG Controlled Prosthetic Hand' published in February issue. (Also available online at <https://www.electronicsforu.com/electronics-projects/wireless-emg-control-prosthetics>). Does this circuit use two HC05 Bluetooth devices?

Ashok

☐ Great project! I have one question. The circuit diagram only shows connection to one servo motor, but the project description states that it can control up to five servo motors. Is it really possible to control five servo motors? If so, how? Your reply would be greatly appreciated.

Elsie

EFY. Yes, both the circuits have HC05. In the EMG circuit diagram, I have not shown Bluetooth HC05 as lots of

wiring crossing each other would have made the circuit confusing. The HC05 connection will be the same in both the circuits, which I have stated in the article as well.

Regarding the second question, up to five servo motors can be connected to the same pin of servo. You can also set new pin numbers to control the servo motors, depending on the joints you want to move

WIRELESS CHARGER

Recently I read the DIY article titled 'A simple wireless charger for smart-phones' in August issue. It has been tested by the author himself only, though the video proof was provided. Why didn't EFY test this article independently? It appears more authentic when an article is tested by EFY.

Prakash U.M.

EFY. Glad you noticed and asked. Over time we realised that the time and resources needed to test projects from our authors creates a delay in publishing them. In turn, this means the readers get some of the best projects after a long delay. Hence, we have started getting our authors to demonstrate their working via videos, which we share on website to reduce the 'risk' for our readers. To speed up our processing of DIY articles, we are likely to publish more such author-tested articles whose video proof of proper working has been provided.

ERRATA

On page 97 in August issue, under heading Construction and Testing, the second line is written as "for the sinusoidal signal general..." while it should have been "for the sinusoidal signal generator..."

Sachin

EFY. We thank Sachin for detecting this error and sharing with everyone!
