

DSProds Smart Water Bottle

At DSProds, we are creating the next-gen lifestyle product – The Smart Water Bottle using the latest technology and expert engineering.

With the increasing concerns on health and climate change, DSProds Smart Water Bottle aims to eliminate one-time use of plastic and promotes a healthy lifestyle with constant

reminders and water intake stats.

Our Smart Water Bottle was designed with your busy lifestyle in mind. It's a simple concoction that combines convenience and sustainability, making it easy to drink as many H₂O bottles as you need. It goes with you everywhere, so you can stay hydrated without any hassle. Our bottle restores its smart abilities on its own, letting you track how much water you drink and your cumulative hydration over time.

With smart water bottles from DSProds, your life is in control. We bring you the best of what's on-the-go in an innovative and functional experience that is both portable and stylish. Drink what you love and travel where ever you go. Our Smart Water Bottle lets you tag along with you wherever on planet Earth. Water will never be the same with DSProds'

innovative design.

DSProds Smart Water Bottle is one product with many visions. Together let's take a step towards a healthy lifestyle and a greener planet. Let's create a future inspired by imagination. Witness your concept come alive or own a concept that is bought alive. Be a part of our journey.

RIGOL first 12 bit oscilloscope

RIGOL first 12 bit oscilloscope
RIGOL has launched the latest HDO4000/1000 series oscilloscope on Aug.18 and it has tremendous innovation inside for several specific highlights. RIGOL invented and designed its own "Centaurus" chipset inside with 12 bits vertical resolution which can enhance the high resolution and accurate measurement on Voltage and current simultaneously. The noise level also has an extremely performance which can be down to 18 uV/Div. Thus, the highest system bandwidth can

be up to 800MHz which covered all mainstream applications among current worldwide electronic industry. At the same time, the sampling rate can be up to 4GSa/s under real 12 bits resolution without compromise. The other special highlight is the battery pack design in the rear panel, this feature can benefit the engineer for hand-carry task especially for outside inspection and the battery time can hold on at least 4-hour consecutively. Regarding some advanced functions, it must refer to 3-D time domain Ultra Acquire tool and it can perform the waveform as waterfall diagram fluently. The waveform can be decomposed by different time segments and all the parameters can be indicated individually. Other common applications are also equipped such as versatile trigger capabilities as well, serial bus decoding functionalities, pass/fail judgement, long time

waveform recording and so on.

We can conclude this product as the best tool which can expedite waveform retrieving during research and development status regarding all design engineers. Of course, it can also leverage to quality assurance procedure to make sure all components would be qualified as usual. The most importance is to be applied on mass production line to accelerate the production more efficiently. RIGOL HDO4000/1000 can bring you a whole new test future and assist engineers to optimize the performance to cost value even can allocate an unrivaled design strategy for task completion.
