

96V and offer different outputs from 11.7V to 24.5V. It is a fully enclosed, chassis-mounted part with a certified

isolation rating of 2.25kV DC and an IP67 rating. The module comes with

several protection features, including input under-voltage and reverse polarity, over-temperature, and output over-current and over-voltage. The module features water- and dust-proof connectors and is fully qualified for EMC, thermal/mechanical cycling, salt mist, etc, which makes it suitable for mounting in any unprotected area of a vehicle.

SoC FPGA based SoM

iWave has released an Agilex SoC FPGA based system on module (SoM). The module is powered by a Quad

ARM Cortex A53 processor and comes in two variants of Intel Agilex FPGA SoC, Agilex F-series and Agilex I-series.

The device has 2.7M programmable logic elements that allow processing of huge algorithms. It is compatible with various communication protocols, including SPI, UART (Data and Debug UART separately), and I2C. For connectivity, the module comes with USB2.0, Ethernet port, etc. The device aims to meet various computational applications like processing mathematical algorithms and even networking solutions.

ENTERPRISE SOLUTION

Enterprise SSD solution

Phison Electronics has launched an advanced enterprise SSD solution called X1, which was jointly developed with Seagate. The X1 controller based solid-state drive (SSD) platform offers more than 30% faster data read speed than the existing solutions for

the same power used. The X1 features U.3 PCIe Gen 4 × 4 dual port and

comes in storage sizes of up to 15.36TB. The SSD packs higher data density and has been launched to bolster the

industry's enterprise-class product offerings for a variety of applications, such as AI, cloud storage, and 5G edge computing.

Industrial Ethernet transceiver

Onsemi NCN26010 is an Ethernet transceiver developed for Industrial automation. The NCN26010 is a 10Mb/s, IEEE 802.3cg-compliant device, which includes a media access

controller, PLCA reconciliation sublayer, and a 10BASE-T1S PHY

designed for industrial multi-drop Ethernet. The transceiver consists of a physical layer that sends and receives data over unshielded twisted pair. It communicates with a power consumption of 55mW to 150mW. The NCN26010 can be employed in applications such as industrial automation, sensor interfacing, and home/building control.

MISCELLANEOUS

Brushless servo motors

Hudson brushless servo motors from Teknic are designed for washdown

applications. The motors are rated for a wide range of DC voltage from 24V DC to 340V DC. These come with UL, ULc, and CE certifications, making the motors capable of withstanding high-pressure sprays and a short duration of submersion under water. The motors are drive-friendly and have a non-proprietary, open-standard communi-

cation design, which makes integrating them into any system convenient. The motors are RoHS, REACH, and Conflict Mineral compliant and are suitable for operation in medical, AOI, and CNC equipment.

Solder paste cleaning roll

ROCKA Solutions has released a new SMT stencil clean roll with high absorbency. The stencil cleaner is

capable of cleaning all types of solder paste residues and other viscous materials allocated

into the stencil apertures or stencil contact side surface. The stencil paper material is made up of hydraulic interlaced fibres and has a high absorbency and high tensile strength. The paper-like material can absorb 330gm water per metre square. Based on the material complexion, this stencil paper is capable of working with ultra-fine pitch apertures, improving cleaning cycle time due to high absorption and paper texture allowing better vacuum performance.

Lead-free BGA sphere

PF918-S from SHENMAO America is a high thermal impact reliability BGA sphere. It is a lead-free BGA sphere

that offers a higher tensile strength performance that is up to 1.4 times higher than the

typical SAC305 alloy while having a similar range of melting points. It also offers the same reflow profile, making it a perfect upgrade over the existing SAC305. It provides better mechanical shock, tensile strength, and thermal cycling performances than typical solder alloys, such as SAC305 and SAC405.
