

Double-door refrigerator versus side-by-side door refrigerator (Credit: www.amazon.in)

and cost to the device. Ideally, capacity of 121 to 230 litres is decent for single or two people, 231 to 300 litres for three people, 301 to 400 litres for four or more people, and over 400 litres for more than four users.

The refrigerator must come with at least one-year warranty, and ten-year warranty on the compressor.

Compressor is the main component that decides the cooling efficiency and energy rating of the refrigerator. The refrigerator should be at least two stars—the higher the energy star rating (2, 3, 4 or 5), the more efficient the fridge. A 230-litre refrigerator with the basic configuration of two-star rating, frost-free and inverter technology features starts at ₹ 20,000. Price increases with increased star rating and capacity.

Water purifiers

This is an important household appliance that helps protect the health of your family against water-borne diseases. There are different types of water purifiers available in the market, but do you know which technology you should prefer?

There are four common types of water purifiers, namely, gravity, UV (utilises UV rays), RO (reverse osmosis) and RO + UV. Gravity water purifiers are suitable for removing only physical impurities like mud and particles. These are the cheapest

because they work without electricity.

UV-based water purifiers are suitable for removing micro-organisms, bacteria, viruses and protozoan cysts as well.

RO-based purifiers also protect against such chemicals as lead. RO + UV have benefits of both the technologies and provide complete purification against physical impurities, micro-organisms and chemicals like arsenic.

Some purifiers come with storage capacity, too. UV- and RO-based water purifiers utilise electricity to filter water. Large families or those who suffer from frequent power cuts can consider a water purifier with a storage tank.

Gravity water purifiers come with several filters. Two main filters are activated carbon and ultra fine (UF). Activated carbon filter is made from small carbon granules that absorb impurities and any odour present in water as it passes through.

UF filter, on the other hand, has a membrane made of hollow fibres. When water passes through this membrane, impurities stick to the hollow fibres.

The upper compartment stores tap water, while the lower compartment stores purified water and has a dispenser tap. Filters are placed between the two compartments, so water in the upper compartment is

SHAVISON®

Peripherals for Industrial Automation

- SMPS
- Open Frame SMPS
- SMPS Black Series
- SMPS Accessories
- Battery Chargers
- High Speed Opto Interface Module Operation upto 200KHz
- Protection Relays
- Hooters
- Signal Converters / Isolators
- Analog Timers
- Digital Timers
- Relay Interface Modules
- SSR Interface Modules
- FRC/ D-SUB connector
- FRC/DSUB Cables
