

How Technologies With AI Can Help Control Disease Outbreaks Like COVID-19

We can draw important lessons from the way deadly Corona virus is being handled in various countries successfully, especially in China, with the help of various new technologies

comprehensive measures with the help of artificial intelligence (AI) to control the outbreak.

Online medical assistance

In China, cloud-based online consultation websites and apps helped the people deal with the outbreak. Doing online consultation from home, instead of going to the hospital, helped control the transmission of the virus in public places and hospitals. Such cloud-based online consultation services with AI algorithms can identify seriously ill patients and manage patients intelligently.

Many hospitals in China offer online medical consultation and video chat facility with doctors to consult for any medical problem. During the outbreak, infected patients were able to consult the doctors directly from their homes. They could also take advice from the doctors using various websites and apps.

The outbreak of Covid-19 has become a global emergency of 2020. So, various preventive measures are being taken to control the infection. The outbreak first started at the Wuhan city of China before it spread across the country. In China, doctors tried their best to cure the patients but most of the medications failed, and the death toll increased dramatically.

The outbreak caused such an emergency that a new hospital named Huoshenshan Hospital was built within ten days at Wuhan. Controlling such a deadly outbreak is a very challenging task, but people of China took various
