

Service robots for medical assistance

Many apps like Jingdong and Wei Yi provide online medical consultation services to the patients in China, and these work through cloud-based AI systems. Five hospitals in east China's Anhui Province started offering Internet-based diagnosis and treatment to the patients having fever on their official WeChat accounts from 24th January.

Hospital of Anhui Medical Uni-

versity and many others are treating patients online. Using such AI-based online medical consultation services is helping many patients in getting medical support at home. Self-quarantine has helped minimise the outbreak of this disease in China to a great extent.

Medical service robots

Apart from online medical services, hospitals in China at Guangdong province are using service robots to deliver medicines and communicate with the infected patients. Using robots instead of nurses or attendants to communicate with an infected patient reduces the chance of cross-contamination and transmission of disease to others. This helps in keeping the nurses, doctors and others safe from getting any kind of infection. These service robots are made of non-corrosive material, which can be cleaned with disinfectants for sanitisation.

Companies like Orion Star have supplied many such service robots

to various hospitals in China to deal with the coronavirus outbreak. The service robots are programmed with AI algorithms and can work almost like a human being. So, using such service robots can help the health-care personnel to deal with infected patients safely, during any such deadly outbreak.

Thermal imaging system

In China, people are being screened using sophisticated temperature detection devices and thermal vision cameras, which are connected to AI systems, to detect infected people with fever in various public places such as airports. Such intelligent screening systems are able to control the outbreak of coronavirus infection efficiently. Such AI-driven fever detection systems can help in preventing seriously sick people from traveling in public transport, and simultaneously alert the paramedics about them.

HASCO
Professional Relay Manufacturer Since 1976

HASCO RELAYS & ELECTRONICS INT'L CORP.
manufactures Relays from 1A to 140A.

Relays for SOLAR INVERTERS and POWER SUPPLIES

Our HASCO RELAYS
are extensively implemented in HVAC systems, Lighting Controls, UPS controls, EV Charging, Appliances, Solar Panels, Automotive Systems and Energy Saving Industrial Equipment.

Our ISO9001 & ISO14001 HASCO Electromechanical Relays are CUL & TUV Certified.

These relays have high coil-to-contact breakdown voltages and wide contact gaps
