It's not a surprising fact that medical error is the third largest killer in the US, next to heart disease and cancer. As per some reports, medical errors claim about 400,000 lives each year in the US. The number of deaths in India is much higher. A recent study by the Harvard University showed that nearly five million deaths occur in India annually due to medical errors.

The most common errors are related

to diagnosis, prescription and inappropriate use of medicines. Millions of patients are harmed each year due to unsafe healthcare worldwide, resulting in 2.6 million deaths annually in underdeveloped and developing countries alone, according to World Health Organization. So, what is the solution?

One solution for healthcare providers and policy makers is to take help of modern technologies such as artificial intelligence (AI) and digital healthcare.
