8. OpenNebula. OpenNebula is a simple yet powerful and flexible turnkey open source solution to build private clouds and manage data centre virtualisation. The OpenNebula platform manages a data centre's virtual infrastructure to build private, public and hybrid implementations of Infrastructure as a Service. The two primary uses of the OpenNebula platform are data centre virtualisation solutions and cloud infrastructure solutions.

The main features are:

- Supports numerous APIs like AWS EC2, EBS and OGF OCCl.
- Powerful UNIX based CLI for administration.
- GUI for cloud customers and data centre professionals.
- Resource allocation via fine-grained ACLs; load balancing, high availability, high performance computing.
- Powerful scheduling for task management.
- Supports integration with LDAP and Active directory.
- Supports SSH and X.509 for security, and even supports login token functionality.

Official website: <http://www.opennebula.org>

Latest version: 5.8.4

9. Eucalyptus. Eucalyptus is an acronym for Elastic Utility Comput-

ing Architecture for Linking Your Programs to Useful Systems. It is an open source software framework that provides the platform for private cloud computing implementation on computer clusters. Eucalyptus implements Infrastructure as a Service (IaaS) methodology for solutions in private and hybrid clouds.

Eucalyptus provides a platform for a single interface so that users can calculate the resources available in private clouds and the resources available externally in public cloud services. It is designed with extensible and modular architecture for Web services. It also implements the industry standard Amazon Web Services (AWS) API.

The main features are:

- Works with multiple hypervisors including VMware, Xen and KVM.
- Communication within internal processes is secured through SOAP and WS-Security.
- Offers administrative features such as user and group management, and reports.
- Well-defined interfaces (via WSDL, since they are Web services) and thus can be easily swapped out for custom components.
- Flexible and can be installed on a very minimal setup.
