

SAVE BURIED AND DROWNING PEOPLE

This is regarding the article 'Electronic Detection Can Save Buried And Drowning People' published in March 2019 issue and also available on your website at <https://www.electronicsforu.com/technology-trends/tech-focus/electronic-detection-save-buried-drowning-people>. How can we implement these ideas in a drone like Drone Finder?

Ravinder Singh Bhandari

The author Dr S.S. Verma replies:

I would like to point out that the article deals with the use of electronic methods near the surface of land, or by inserting probes into land or water to sense electronics based activities from the buried or drowned people, to detect their presence at the earliest and save them. Whereas use of drone-like devices (i.e., Finder) from distances can help only to locate things on the surface of land or water, finding by drones is not possible beneath land or under water.

However, in future, drone technology might be developed for such requirements also with more powerful signals (EM waves, etc) and sensors probing beneath land and under water.

TOUCH SWITCH PANEL

The 'Control Four Appliances with a Touch Switch Panel' DIY project published in October 2019 issue and also available on your website <https://www.electronicsforu.com> is good and informative for students. Thank you!

Ravi Kumar

Technology/Resources

Thanks for an insightful article titled 'Business Setup For e-Waste Recycling' under Project Report section published in EFY and also available on your website at <https://www.electronicsforu.com/technology-trends/must-read/business-setup-e-waste-recycling>.

I am also interested in setting up an e-waste and recycling plant.

Sahil

I would be interested in setting up an e-Waste dismantling unit.

Jayant K.

Thanks for the brief article on e-waste and recycling. I am interested to work on this project. I will be thankful if someone can guide me to setup the plant in Bihar.

Kumar Sonu

Please guide me to set up a plant in Pune.

Sakshi

I am interested to work on the project in Mumbai. But first I would like to visit a segregation plant.

Sachin Aphantkar

Thank you so much for explaining the topic in such a simple and easy way to understand.

Ashwajit

The article on 'What are the Differences Between M2M and the IoT' published under Things You Wanted To Know section and also available on your website at <https://www.electronicsforu.com/resources/learn-electronics/difference-between-m2m-and-iot> is very useful and would like to read more about it. I would like to see articles on architecture and testing aspects as well. Keep up your good work!

Mohana

The article on 'Differences Between M2M and the IoT' is really nice and informative. The topic is very helpful for my exams.

Yogesh Sambare

The article titled 'What Are The Components Used In Drone Design?' published under Things You Wanted To Know and also available on your website at <https://www.electronicsforu.com/resources/learn-electronics/components-used-drone-design> is a nice article. Thanks for the valuable information!

Mahammad Sadiq

The 'Technologies That Will Shape Our Lives In 2019' article on your website is very helpful to know the latest technology and development.

Sridhar

EFY. Thanks for the feedback!

❑ The 'Control Four Appliances with a Touch Switch Panel' is a very useful project.

Thushara Fernando

❑ This is regarding 'Control Four Appliances with a Touch Switch Panel' project. Just like in this project, we are also using TTP223 in our projects. Thanks for the information!

Cenellectronics

EFY. Thanks for the feedback!

ELECTRONICS INDUSTRY DIRECTORY 2020

The website mentioned for Elecom International Pvt Ltd under 'Advertisement Index' section on the last page of Electronics Industry Directory 2020 is wrong. The correct website is www.elcom-in.com
