

Nearly 30,000 startups recognised by DPIIT

The Department for Promotion of Industry and Internal Trade (DPIIT) had recognised nearly 30,000 Indian startups by mid-March. SIDBI has committed over ₹ 31,000 million to 47 SEBI-registered Alternative Investment Funds (AIF). These funds, in turn, have invested nearly ₹ 33,800 million in 328 startups together with about ₹ 9,130 from the Fund of Funds for startups. Fund of Funds provides capital to SEBI-registered AIF funds and does not invest directly in startups as a policy.

India's contribution to global EV market less than 0.5 per cent

Despite favourable market conditions and increased investor confidence, the infrastructure to support electric vehicles penetration in India still remains the biggest challenge in the country, as per Electric Vehicles in India Market Outlook report 2020 from DataLabs. The Indian government has set a goal of 30 per cent electric vehicle penetration by 2030 to reduce the excessive dependence on oil imports and curb pollution levels. With close to US\$ 601 million investment spread across 77 deals, the transactional market size of electric vehicles is projected to soar to US\$ 20 billion in 2030.

Haier India bets on smart home solutions

Haier has announced their plans to spearhead the IoT era in the home appliances industry. They are augmenting their product range by launching 83 products across categories such as refrigerators, air-conditioners, washing machines, LED TVs and others. Some of the key products powered by the IoT and AI include seven Google-certified Android smart LED TVs, Wi-Fi enabled washing machines, and smart refrigerators with an in-built LED screen installed in the door.

Mouser signs several agreements

Mouser Electronics has signed global distribution agreement with Zipcores, designers of intellectual property (IP) cores for implementation on FPGA, ASIC and SoC devices. It has signed global agreement with Ultraleap for stocking their Leap motion controller and two haptic modules. With Fractus Antennas, it has signed agreement for stocking a range of their chip antenna solutions, including Virtual Antenna (mXTEND) and Xtend devices for cellular, wireless, and IoT applications. Mouser will now also be stocking STM32L5 ultra-low-power microcontrollers from STMicroelectronics, as per their Press Releases.

the wide network of public charging infrastructure being set up by Tata Power across India. This tie-up is one step forward in creating the right ecosystem enabling a simple and hassle free charging experience for owners of our first electric vehicle, the Jaguar I-PACE, which makes its debut in India later this year.”

Tata Power will provide a range of AC and DC chargers, starting from 7kW to 50kW capacity. It will be responsible to facilitate the installation and management of chargers at the designated premises and after-sales related support services.

Ramesh Subramanyam, CFO and president - new business, Tata Power Company Limited said, “Tata Power is delighted to work with Jaguar Land Rover India as an end-to-end EV charging partner. As India's leading integrated player in the EV charging space, we will provide Jaguar Land Rover India's EV customers with easy, ubiquitous and seamless charging experience at their homes, offices and public places.”

Bharti Airtel to provide 5G-ready network for high-speed Internet services

Bharti Airtel has joined hands with Cisco to launch 5G-ready 100G IP and

optical integrated network designed to enhance network availability, capacity, and scale. This deployment will be a part of Airtel's initiative to build a 5G-ready network that will meet the demand for high-speed data services in India.

The architecture is built with a programmable and software-defined platform. It has already been able to achieve significant speeds with scale to provide new, advanced B2B and B2C services. The company said that the open standards architecture with automation will eliminate manual touchpoints in a brownfield environment.

At the moment, India is the world's second-largest telecommunications market with a subscriber base of 1.17 billion. As per Cisco's Annual Internet Report, there will be 67.2 million 5G connections in India by 2023 and 66 per cent of all devices will be mobile-connected by 2023.

Shortage of alcohol-based fluxes due to corona virus

The spreading corona virus has also affected production of alcohol-based fluxes for electronics manufacturing. Rising prices and even sold out stocks are the latest developments. Water-based or hybrid fluxes, with low alco-

hol additions, are moving into focus as alternatives for use in electronics production.

“We are currently facing extreme conditions on the world market. From 10th to 11th March alone, the prices for alcohols, which are necessary for the production of alcohol-based fluxes, have increased by 400 per cent in some cases,” says Markus Geßner, responsible for marketing and sales at Emil Otto GmbH. Exploding demand, disrupted supply chain, closed manufacturing sites, speculation and increased production of alcohol-based disinfectants have led to massive price escalations.

Emil Otto has come up with hybrid and water-based fluxes to secure production on customers' side. Water-based fluxes being free of alcohol are completely independent with regard to the material purchase prices and the possible production quantities. The soldering results are claimed to be very good and in some cases superior to alcohol-based flux products. These fluxes, also known as Green Line fluxes, are not flammable. These are therefore not classified as hazardous goods and have no legal restrictions on transport, storage and further handling in production.
