

## Tata Power to develop a hybrid renewable power project

Tata Power Green Energy Limited (TPGEL) has received a Letter of Award from Tata Power Mumbai Distribution to develop a 225MW hybrid renewable project. The energy will be supplied to Tata Power Mumbai Distribution under a Power Purchase Agreement (PPA). It will be valid for 25 years from the scheduled commercial operation date. The project is required to be commissioned within eighteen months from the date of execution of the PPA. The company says that the plant is expected to generate about 700 MUs of energy per year and will annually offset approximately 700 million kgs of carbon dioxide. Tata Power's renewable capacity will increase to 3,782MW.

## Hero MotoCorp invests ₹ 840 million in EV startup Ather Energy

Electric Vehicle startup Ather Energy has raised 840 million rupees from one of the world's largest two-wheeler maker Hero MotoCorp. "We're excited to announce an investment of 840 million rupees from Hero MotoCorp as an extension of our Series C round. The investment will be used to further develop our facilities as we prepare to take the Ather 450X across the country," reads a recent social media post by Ather Energy. Ather Energy will be using the funds to develop

its facilities. The company is planning to launch its latest offering, Ather 450X, across India.

## Honda signs deal with CATL to develop EV batteries

Contemporary Amperex Technology Co. Limited (CATL) and Honda have signed an agreement to form a comprehensive strategic alliance on new energy vehicle (EV) batteries. They aim to strengthen their strategic partnership and promote the popularisation of electrified vehicles. Honda has acquired approximately one per cent of CATL shares through the non-public issuance of stocks. Through the non-public issuance of stocks, CATL will strengthen its battery development and further expand production capacity.

## Verizon partners with Microsoft for IoT push

Verizon has announced that its Thing Space IoT Platform, 5G/LTE network, and Critical Asset Sensor devices have all been integrated with Microsoft Azure, the tech giant's popular cloud services offering. The goal is to help companies develop and deploy the Internet of Things (IoT) solutions with relative speed and simplicity. As per a report, veteran tech company Cognizant Technology Solutions has already put the integrated platform to use, leveraging it to create an Internet of Things application to assist with various aspects of the management of perishable items such as pharmaceuticals and food. The newly created platform is available for global use.

technologies like magneto-resistive random access memory (MRAM) and resistive random access memory (ReRAM) are expected to replace traditional technologies. Memory devices require high-precision bonding, testing, cleaning, and packaging for the best performance.

As per the report, "This shift in the memory market has demanded a change in the dynamics of manufacturing equipment, compelling semiconductor manufacturing equipment providers to develop more efficient designs for device manufacturers."

As per the report, the APAC region is projected to hold the largest share of the semiconductor manufacturing equipment market in 2025.

## AI in medicine market to reach \$18.12 billion by 2025

AI in the medicine market is expected to reach 18,119 million dollars at a CAGR of 49.6 per cent by 2025, as per a report by Allied Market Research. The report says that this valuation stood at 719 million dollars in 2017. North America was the highest contributor to AI in the medicine market. It further adds that Asia-Pacific is expected to see the highest growth during the forecast period. It is projected to grow at a CAGR of 55 per cent from 2018 to 2025. This is due to the growth in healthcare expenditure

and R&D activities for advancement in AI technology.

The report says that the growth in the global AI in the medicine market is fuelled by the rise in AI capabilities due to an increase in processing power and growing awareness regarding the importance of personalised medicines.

As per the report, "Due to the global pandemic all over the world, the medical devices manufacturers are majorly focusing on essential medical devices production. However, due to the precautionary measures taken by governments in various regions, the supply chain has been hampered, which may result in a shortage of devices in certain locations."

Based on product type, the hardware segment is expected to witness the fastest growth. Based on technology, the natural language processing segment generated the highest revenue in 2017. It is expected to continue dominance through 2025. Based on the application, the personalised medicine segment is anticipated to encounter the fastest growth rate during the forecast period.

## Apple starts manufacturing iPhone 11 in India

Tech giant Apple has started manufacturing its flagship iPhone 11 model

at its Chennai plant. This is the first time Apple has manufactured a top-of-the-line model in India.

"Significant boost to Make in India! Apple has started manufacturing iPhone 11 in India, bringing a top-of-the-line model for the first time in the country," Piyush Goyal, commerce minister, shared the news on Twitter.

Apple also has plans to make the iPhone SE 2020 in India in its Wistron plant near Bengaluru.

Foxconn, a leading supplier for Apple, has also planned to invest up to one billion dollars to expand a factory in Southern India for assembling Apple iPhones, according to a report by *Economic Times*. As per the report, the move is a part of a quiet and gradual production shift by Apple away from China as it navigates disruptions from a trade war between Beijing and Washington and the coronavirus crisis.

Pegatron, the second-largest iPhone assembler after Foxconn, is also likely to make some investment in the country and set up a local subsidiary in the coming future.

With Apple widening its local presence, it would be a boost for Prime Minister Narendra Modi's 'Make In India' drive aimed at creating new jobs.
