

Technology's Increasing Role In Education And Skill Development

The introduction of new technologies and electronic gadgets has played an important role in transforming the education sector in numerous ways. When education is coupled with technology, students and teachers find it more interesting because sharing of knowledge becomes more engaging, easier, and hassle-free

Nijhum Rudra

Technology has become the most imperative element of our lives and is helping to solve the endless intricacies of our hectic lives. In this 21st century, science and technology are playing a vital role in boosting the global economy. As experts rightly point out, any business or economy that does not have sophisticated technology cannot grow further. Its importance is now visible in every sector, and one such sector is education.

Technology has played a crucial role in transforming the education sector in numerous ways. Both public and private schools are now using technology and electronic gadgets for teaching, which makes their work much easier.

As per several surveys conducted by education experts, when education is coupled with technology, students and teach-

ers find it more interesting because sharing of knowledge becomes more engaging, easier, and hassle-free. The Internet has played a key role in making technology more accessible to people.

In education, technology's role is divided into four categories: it is included as a part of the curriculum, as an instructional delivery system, as a means of aiding instructions, and also as a tool to enhance the entire learning process.

Education is still skewed towards digital domains. But this has to change, and technology needs to be seen as a core to teaching methods and not just a vestigial facilitator.

Prior to the Covid-19 situation, nothing much was happening. There were several e-learning platforms like Byju's, but the adoption of technology in education was very minimal.

For most of the educational institutions, technology means setting up a computer/IT lab where an outdated curriculum is followed. Often, you will not find any initiative or support coming from the institutions, but there are several informal groups formed by students.

Technology's deep role in education

According to the US government, both public and private schools have at least one computer for every five students, and they spend more than three billion dollars annually on digital content. A couple of years back, the US federal government announced that they were planning to intro-
