

Great Opportunity In AI And ML Hardware Sector

The introduction of new technologies such as artificial intelligence (AI), machine learning (ML), and data science has led to several growth opportunities in various sectors. These technologies will dominate almost every aspect of growth and business in the coming years. However, there are a few challenges that need to be addressed to tap the opportunities for maximum benefits

Mukul Yudhveer Singh

Artificial intelligence (AI), machine learning (ML), and data science have become what IT and ITES industries used to be in the 1980s. The scope of opportunities is huge in these new emerging sectors. Just like IT and ITES industries, these can dominate almost every aspect of growth and business in the coming years. However, AI hardware is in its nascent stage since semiconductor chip development has a limited presence in India.

While discussing the same, a panel moderated by Poornima Shenoy, CEO, Hummingbird Advisors, shed light on

opportunities and challenges in AI and ML electronics hardware sector. This panel discussion was hosted by the Electronics Sector Skills Council of India (ESSCI).

The imminent panel of experts included:

- N.K. Mohapatra, CEO, ESSCI
- Ashok Mishra, VP, ASIC BU, ALTEN Calsoft Labs
- Bharat Daga, principal engineer and director of engineering, Intel Corporation
- Sathya Prasad, director, Centre for Innovation & Entrepreneurship (CIE), PES University

The panel discussions focused on AI and ML electronics hardware from the
