Acme Solutions (a hypothetical company) is experiencing significant growth in its products and services. Acme's customer base is continuously increasing. An increase in the customer base is leading to an increased number of calls to their incident management support centre.

To keep up with the growth, Acme Solutions does not want to increase the headcount in their incident management support centre by implementing an artificial intelligent (AI) chatbot solution. By doing this, they expect to provide adequate support to incidents reported by customers, without additional headcount. Customers will be able to interact with chatbot and report their problems to, perhaps, get instant solutions too.

Should Acme Solutions embark on an AI chatbot project? If this project is completed, will it solve Acme's problem(s)?

If you think deeply, you will realise a flaw in Acme's thought process—their hypothesis. Their hypothesis is, if we implement an AI chatbot, we can address the
