

Gaming keyboard

Built for performance and longevity

HyperX, the gaming division of Kingston Technology, has added a new product to its lineup of gaming keyboards, HyperX Alloy Origins Core. Featuring HyperX Red mechanical switches, the new keyboard is built for performance and longevity with a shorter actuation point and eighty million click rating. HyperX Alloy Origins Core gaming keyboard maximises desktop real estate with a space-saving tenkey-less layout for ultimate mouse movement. The keyboard features RGB-exposed backlit keys for brighter illumination with radiant lighting effects and five adjustable brightness levels to enhance gaming, day or night. For added durability, stability and flexibility, Alloy Origins Core is built with a full aircraft-grade aluminium body, and USB Type-C to USB Type-A keyboard cable is detachable.

Alloy Origins Core features Custom Game Mode, allowing users to choose which keys are enabled and disabled. Macro keys can be assigned and stored in the macro library,

and users can choose from three adjustable keyboard angles for perfect positioning. Equipped with HyperX NGENUITY software, Alloy Origins Core offers advanced customisation features for lighting and macros, including simple customisable per-key lighting effects. With on-board memory, users may save up to three of their Alloy Origins Core profiles for on-the-go gaming using HyperX NGENUITY software. The keyboard also includes hundred per cent anti-ghosting and full N-key rollover.

Safety smartwatch

Designed for the security and safety of kids

CP Plus has announced its entry into the category of child security with the launch of kids' smartwatch, EzyTrack. It allows parents to easily track, monitor and connect with their children at any time and place.

EzyTrack smartwatches for kids have various inbuilt features essential for both children and parents. Available in different models and colours, the watches support touchscreen for ease of use, SOS emergency button to quickly send messages to parents and two-way communication. With GPS tracking, parents can identify the real location of their kids.

In addition, geofence alert can be set up for a real-world geographic area. EzyTrack smartwatches also come with other advanced features like iOS and Android apps, inbuilt camera, voice chat, find friends, pedometer, low-battery alert and watch taken off alert. These smartwatches are also handy for the elderly.

Bluetooth earphones

Built to deliver high quality stereo sound on-the-move

Digitek has launched DBE-021, a stylish Bluetooth stereo earphone built with A2DP/AVRCP technology to deliver high-quality stereo sound. The sturdy device supports Bluetooth 5.0, and offers exceptional performance with a stable connection, sound frequency and long-distance control protocol. It sports a robust design for a comfortable fit, especially during high-intensity activities like gym exercises, running or other sports activity.

DBE-021 comes with easy-to-use and comprehensive control buttons for wireless operations. The built-in microphone facility enables users to manage hands-free calling easily. When charged for one hour, users can enjoy music up to five hours or five hours of calling. In case of low battery, the built-in voice prompt acts as a reminder to charge the device.

Other notable features of DBE-021 are echo cancellation as well as noise reduction technology to enjoy music seamlessly, smart power off function to automatically turn off the device when not connected to any smartphone within eight minutes. Digitek's DBE-021 has a signal coverage within walking distance of ten metres of barrier-free space, music track selection, play and pause functions.
