

RBI launches mobile app MANI for the visually challenged to identify currency notes

Reserve Bank of India (RBI) governor Shaktikanta Das has launched a mobile application to help visually-impaired people to identify the denomination of currency notes. Users can download the application, called MANI (Mobile Aided Note Identifier), for free from Google Play Store or iOS App Store. The application can scan currency notes using the camera of the cellphone. It also gives audio output in Hindi and English. The application also works offline once installed. However, it does not authenticate a note as either genuine or counterfeit.

Microsoft re-launches Edge browser

Microsoft Edge, the Web browser that replaced Internet Explorer with the release of Windows 10, has been given a dramatic overhaul. The new version of Microsoft Edge, based on Google's Chromium, has been officially launched on Windows and macOS. Those running Windows 10 will receive the new Edge as an update, at some point in the next few months.

Amazon Alexa gets Eat Right app developed by FSSAI

Indian food regulator Food Safety and Standards Authority of India (FSSAI) has tied up with Internet giant Amazon to launch Eat

Right quiz on Alexa Skill Store. This quiz is part of FSSAI's Eat Right India campaign aimed to improve public health in India and negative nutritional trends to fight lifestyle diseases. With this partnership, FSSAI is trying to capture the young Indian population who are regular users of Amazon's voice-assistant Alexa. The food regulation body wants healthy eating habits to become a mainstream conversation among students and to achieve this they are now leveraging technologies like virtual and augmented reality (VR and AR), said Pawan Agarwal, chief executive officer, FSSAI.

Haptik develops intelligent virtual assistant for IIFL

Haptik has built a next-generation intelligent virtual assistant (IVA) for IIFL Holdings Ltd (formerly India Infoline Finance Ltd), an Indian diversified financial services company headquartered in Mumbai that serves over four million customers across various business segments. ASK-IIFL IVA by Haptik employs automated query resolution for a variety of common use-cases, and through multiple API integrations, IVA has been linked to IIFL's knowledge system and CRM, ensuring effective dissemination of information to users at any point of time. IVA runs at a resolution time of 45 seconds, resolving queries 75 per cent faster, while enabling more than 30,000 conversations and receiving an average user feedback of 3.7 out of 5.
