

SOME INNOVATIONS SHOWCASED AT CES 2020

Nijhum Rudra

Global trade show Consumer Electronics Show (CES) is held in Las Vegas, USA, every year, and is organised by Consumer Technology Association. This year, it showcased about 4400 exhibiting companies, comprising manufacturers, developers and suppliers of consumer technology hardware, content, technology delivery systems coupled with numerous conference sessions, and featured approximately 170,000 participants from 160 countries.

This innovative tech conclave has been going on for over fifty years, and has helped thousands of big and small companies all around the world to display their cutting-edge technologies on a global platform. The show featured admirable debuts this year, related to 5G, artificial intelligence (AI), transportation and, most importantly, it showed how innovative technology can help every business to flourish. There were eleven official venues, and the show had 2.9 million square feet of exhibit space, featuring 36 product categories and 22 marketplaces.

Let us find out some of the top-notch technologies and devices unleashed this year at the world's biggest consumer technology exhibition.

Smartphones

Let us take a look at some of the smartphone offerings from CES 2020.

Cat S32. Berkshire-based smartphone company Cat Mobile launched its unique smartphone at CES. Dubbed Cat S32, it operates on Android 10 and claims to have modest hardware. It appears in a single black colour, and will be available with carrier partners, in authorised retail stores and on the official website.

The phone is backed by MediaTek Helio A20 quad-core chipset coupled with 3GB RAM and 32GB ROM. For optics, it features 13MP rear sensor with f/2.0 aperture and phase detection autofocus (PDAF), while the front sensor includes 5MP camera for selfies. The phone is powered by 4200mAh battery with fast charging support, and is equipped with a 13.9cm (5.5-inch) HD+ (720 × 1440 pixels) display with 18:9 aspect ratio and Dragontrail Pro cover for protection. It is priced at EUR 299.

OnePlus Concept One smartphone. The Chinese premium phone-maker also appeared at the exhibition and showcased its premium OnePlus Concept One

smartphone, which has been unleashed in association with McLaren.

The phone also serves a practical purpose as the glass is said to double as a polarising filter for cameras when shooting under very harsh lights. This feature can be applied if the camera app is in pro mode, which then permits longer shutter and lower ISO. Price and launch date are yet to be announced by OnePlus.

Coolpad Legacy 5G phone. Coolpad revealed its new 5G smartphone, which would be the cheapest 5G smartphone

in the West. Interestingly, this 5G phone features dual rear sensor, 48MP primary sensor and 8MP wide-angle sensor. For selfies, it includes 16MP sensor in water drop design.

It is powered by 4000mAh battery along with 18W fast charging, and features Qualcomm Quick Charge 3.0 standard. The device is backed by Qualcomm's octa-core Snapdragon 765 chipset coupled with 4GB RAM and 64GB of UFS 2.1 internal storage, which can be further expanded to 128GB. It will be available for US\$ 400.

Samsung Galaxy Note 10 Lite and S10 Lite. South Korean smartphone giant Samsung exhibited Galaxy Note 10 Lite and S10 Lite at CES this year. Both phones feature edge-to-edge 17cm (6.7-inch) Infinity-O screen that has the potential of complete HD resolutions along with a pixel density of 394ppi.

The difference between the two is the chipset; S10 Lite carries Snapdragon 885 SoC, while Note 10 Lite carries the company's own Exynos 8895 processor.
