

Investing In AR And VR: A Promising Tactic Or A Sheer Gamble For Your Business?

Various market reports suggest that exponential strides in extended reality (XR) technology in the coming years are going to teleport mankind into a world of unimaginable illusion. Yet, like any other technology in its infancy, a lot of issues still need to be resolved for wide-scale adoption

Remember how in 2016 Pokémon Go became a worldwide trend? Stories around it, to this day, are enough to explain the real-life impact of extended reality (XR) in the gaming sector. Fast forward to 2020, we already have several businesses developing XR applications beyond the realm of gaming for practical utility. Under the hood of XR, augmented reality (AR) and virtual reality (VR) are slowly changing the business landscape.

James Watson, chief marketing officer, Immerse, says, "As a new technology the challenge is to be able to demonstrate efficacy and commercial value of enterprise VR. Many of the technological challenges have been overcome; focus is now shifting towards commercialisation and positioning of the technology. There has been a shift from 'Why should we consider VR?' to 'How do we go about using VR?'"

But which businesses can benefit from
