

AR And VR Market Size Likely To Grow Exponentially

To succeed in the AR/VR market, adopting perfect strategy is the most important task because competition is increasing drastically

Deepshikha Shukla

Augmented reality (AR) is a unique technology through which people can have an interactive experience of a real-world environment where real objects are showcased either through various sensory modalities or via computer-generated

perception information. It also includes visual, auditory, haptic, somatosensory and olfactory experiences. In a simple way, it amalgamates the physical environment and digital information, which helps people to view the superimposed object
