

COMPONENTS

Fresnel lens

TE Connectivity (TE) has launched Fresnel lens that fits directly on the passive infrared sensor (PIR) on AmbiMate MS4 multi-sensor module, giving the device a detection zone of four metres diameter at a height 2.8 metres. Using

the adaptor supplied in the kit, the lens can be fitted quickly, and no further design consideration is needed to hold it in place. Design of the lens is compact, disguising the sensor, giving an unobtrusive aesthetic and adding to a clean ceiling design. Having multiple features that steer the infrared from a warm moving body to the four-detection element of the PIR sensor. The lens has an eighteen-detection zone pattern.

Half-bridge gate drivers

Infineon Technologies broadens its Eice-DRIVER portfolio with 650V half-bridge gate drivers based on Infineon's unique silicon on insulator (SOI) technology. The products provide leading negative transient voltage immunity, monolithic integration of a real bootstrap diode, and superior latch-up immunity for MOSFET- and IGBT-based inverter applications. These unique features enable more robust and reliable designs at reduced bill of materials (BOM) cost. The high output current family 2ED218x is tailored for high-frequency applications like induction cooking,

air-conditioning compressors, SMPS and UPS. The low output current family 2ED210x is targeting home appliances, power tools, motor control and drives, fans and pumps.

Quarter-brick DC-DC converter

Artesyn Embedded Power has announced BDQ1300, a new 1300-watt quarter-brick DC-DC converter, designed to provide the highest effi-

ciency onboard 12V output for telecom, computing and server applications, with optional digital control. With efficiency rated over 97 per cent, the BDQ1300 is designed as a voltage source for non-isolated point-of-load converters. It can accept an input voltage range from forty to sixty volts, making it ideal for 48-volt data centre and communications network equipment.

5G chipsets

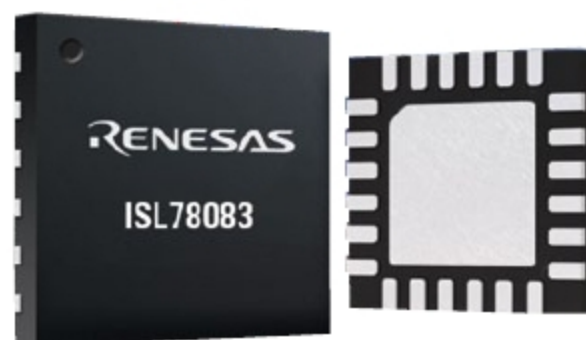

MediaTek has introduced Dimensity 800 series 5G chipset family that will bring flagship features, power and performance to new premium mid-range 5G smartphones. MediaTek's Dimensity 5G chipset family offers powerful system-on-chips (SoCs) with integrated 5G modems. The single chip solutions offer an unrivaled combination of con-

nectivity, multimedia, artificial intelligence (AI) and imaging innovations packed into an ultra-efficient 7nm chip.

Power management IC

Renesas Electronics has announced ISL78083, a highly integrated power management IC (PMIC) that simplifies power supply design for use in multiple

HD camera modules, reducing development cycles, BOM cost and supply chain risks. The automotive camera PMIC accepts direct-from-battery (36V-42V) or power-over-coax (15V-18V) supply sources and supports output currents up to 750mA per output. This power level offers ample headroom for existing image sensors up to seven-megapixel and future sensors with even higher resolution.

TEST & MEASUREMENT

Oscilloscope

Siglent Technologies presents the third generation of their 2000 series of oscilloscopes. Key features are:

- 100MHz, 200MHz, 350MHz (upgradable to 500MHz) models
