Augmania

Visit: www.augmania.com

Full version: Paid; free trial

Augmania is a software-as-a-service (SaaS) platform that allows content creators to develop interactive augmented reality (AR) experiences supporting media assets without the need for coding skills, technical knowledge related to AR or building apps for different systems. It provides a library of ready-made AR templates that can be deployed with simple changes on Web and mobile browsers. Creators can share their experiences across social networks, print and even TV. The software uses real-time analytics to track campaigns, and the dashboard helps users to understand the results.

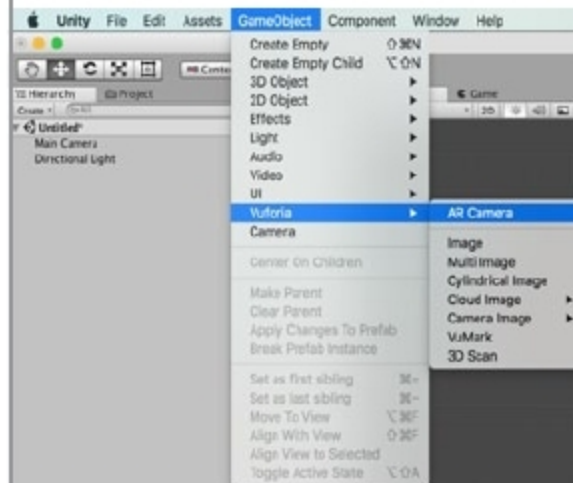

Vuforia Engine

Visit: <https://developer.vuforia.com>

Full version: Paid

Vuforia Engine platform lets developers build industry-ready solutions for immersive AR experiences. Users can add computer vision functionality to make interactions with surroundings more realistic. The software's recognition and tracking capabilities can be used on a wide range of images and objects. Applications include industrial equipment, print media, vehicles, toys, home appliances, product packaging, beverage bottles, soda cans and more. Ground Plane feature enables placing of content on horizontal surfaces like tables and floors. The software also allows easy integration and provides support for cross-platform deployment (like Unity).

NuSpace

Visit: www.nuspace.live

Full version: Paid

NuSpace by Imagine is a cloud-based 3D meeting platform in virtual reality (VR) or AR that allows people in B2B space to collaborate for training and maintenance purposes. By viewing relevant information in real time and voice support from experts, the software makes it easy for workers to solve issues. It is compatible with various mixed reality (MR) devices like Microsoft HoloLens, Samsung Gear VR, Google Cardboard and Oculus Rift. This saves time, resources and money as an increased number of complex and risky scenarios can be handled by employees remotely.

Inde Broadcast AR Development

Visit: www.industry.com/broadcast-ar; **Full version:** Paid

Broadcast AR software allows users to create interactive 3D AR experiences to engage target audience in the fields of entertainment, education and advertising. Ready-made content packages include a variety of environments ranging from dinosaurs to whales. Live rendering lets viewers to control the movement of characters on screen. Besides enabling a device-free experience, the software can be used to custom-build for any screen type or size. Other benefits include multiple users, remote control access, shareable images and videos, and high flexibility.
