Dual-screen smartphone

Offers double the fun, twice the productivity

LG Electronics has unveiled G8XThinQ, its newest G series smartphone. The dual-screen smartphone is designed to help users find a whole new way to multitask while being creative in its design and outlook.

LG G8XThinQ dual screen lets consumers be as productive as they can be, quickly and easily. Whether texting a friend while watching a video, updating fantasy football while researching stats, sharing and comparing while online shopping, or writing an email while referencing a presentation, consumers can navigate, research, communicate and more across two screens simply and efficiently.

It features unique experiences that provide more control for scenarios where two identical OLED displays

simply work better than one, saving precious screen real estate. LG gives consumers the option to have power and flexibility of two screens, but the freedom to choose one based on the situation. By detaching LG Dual Screen from LG G8XThinQ, going minimal is as simple as a snap.

LG dual screen boasts a convenient cover display with such essentials as notifications, date, time and battery life available at a glance. With a 360° free-stop hinge, LG dual screen is able to lock at any angle, making it practical for use as a game controller at 120°, a mini-laptop at

140°, flat at 180°, a stand or tent at 270° or to take a call flipped back on itself at 360°.

Bluetooth speaker

Travel-friendly wireless Bluetooth speaker

Pebble extends its travel range of accessories with Dome wireless Bluetooth speaker. The palm-sized speaker is lightweight and compact. With no compromise in sound, the speaker serenades from the bedroom to the beach, and everywhere in-between. Despite its tiny size, the speaker brings high-quality sound in 5W.

The speaker produces deep heavy bass stereo sound with enhanced clarity, promising the loudest music for outdoors. It gives extended playtime, with 1200mAh battery, five hours of non-stop music from a single charge. The speaker connects up to ten metres away.

Dome also features inbuilt FM along with several connectivity options including micro-SD/USB/aux, providing the all-in-one experience. Wireless 5.0 Bluetooth also comes with TWS connectivity, which connects two Pebble Domes at one time, for surround sound stereo effect. Dome also supports handsfree calling facility, enabling ease of use between music and calls.

CCTV camera

Supports motion detection and Alexa voice support

French audio brand Zoook marks its entry into the security and surveillance market with the launch of Zoook Eagle Cam 100. The CCTV camera is built to provide all-round surveillance with 360-degree pan and 90-degree tilt capabilities. Zoook Eagle Cam 100 is a full-HD 2MP camera sporting SD card storage of 128GB. The camera can be enabled through Wi-Fi as well as LAN, and various features can be controlled via a smartphone. The device can be connected with Amazon Alexa, and users can also operate Zoook Eagle Cam 100 with voice commands. Leveraging artificial intelligence (AI) capabilities, the camera is equipped to capture and send alerts based on motion detection.

Security Alarm feature in the camera works in sync with motion detection, and the loud alarm warns about any unwelcome activities. In-built microphone and speaker enable two-way communication. Other notable features are cloud storage facility, 4x digital zoom capability to enlarge images as per requirement and night vision feature to capture video during night-time with clarity.
