

Digital multimeters

minoo Impex has revamped their multimeters 603 and 603A, to 603+ and 603A+. These can measure AC/DC voltage, AC/DC current, resistance, capacitance, frequency, temperature (only 603A+), hFe, diode and continuity. The unique feature is these can test for IR rays being emitted and help in knowing their intensity. For example, intensity of IR rays from TV remotes can be tested to infer whether batteries have to be changed.

These can also test for live wires. Data hold function allows the user to hold the measured value for logging purposes and auto power-off helps in conserving and prolonging battery life.

Clamp meter

MECO-G has introduced a 6000-count 1000A AC/DC clamp meter. This instrument can measure AC/DC volts, AC/DC current, resistance, capacitance, frequency and temperature. It has diode test and continuity test feature. It has high accuracy and high resolution. This is an ideal instrument for maintenance in large electrical establishments and power stations.

MISCELLANEOUS

Gap filler dispenser

Abrasive thermal pastes are found in a wide range of applications, including in the production of LEDs, circuit boards and in control systems in automotive applications, to name a few. Through regulation of thermal resistance, these pastes, referred to as gap fillers, ensure heat transfer between

the two components. To guarantee this property, gap fillers are offset with up to ninety per cent filler material. The new version of eccentric screw pumps from ViscoTec contain ceramic rotor shafts that reduce wear and tear of dispensing components, thereby providing end-users an extended service life, which, in turn, contributes to energy-efficiency and reduction in maintenance and repair costs.

Standalone access control

Access control is always a critical aspect of an organisation's overall security strategy. Regardless of its size, it is inevitable for any organisation to have a flexible and comprehensive access control solution. To connect separate areas in the single location requires standalone access control. For small and medium organisation, Matrix has designed a standalone Access Control solution for small organisations, while keeping security and simplicity in mind. This innovative solution works on industry-standard IP protocol allowing organisations to expand easily even with a single door. This eliminates the need of installing any application software.

LoRa development packs

STMicroelectronics has introduced two ready-to-use development packs that enable all types of users from large corporations to smaller companies, independent designers, hobbyists and schools to utilize LoRa's long-range, low-power wireless Internet of Things (IoT) connectivity for tracking, positioning, metering and many other applications.

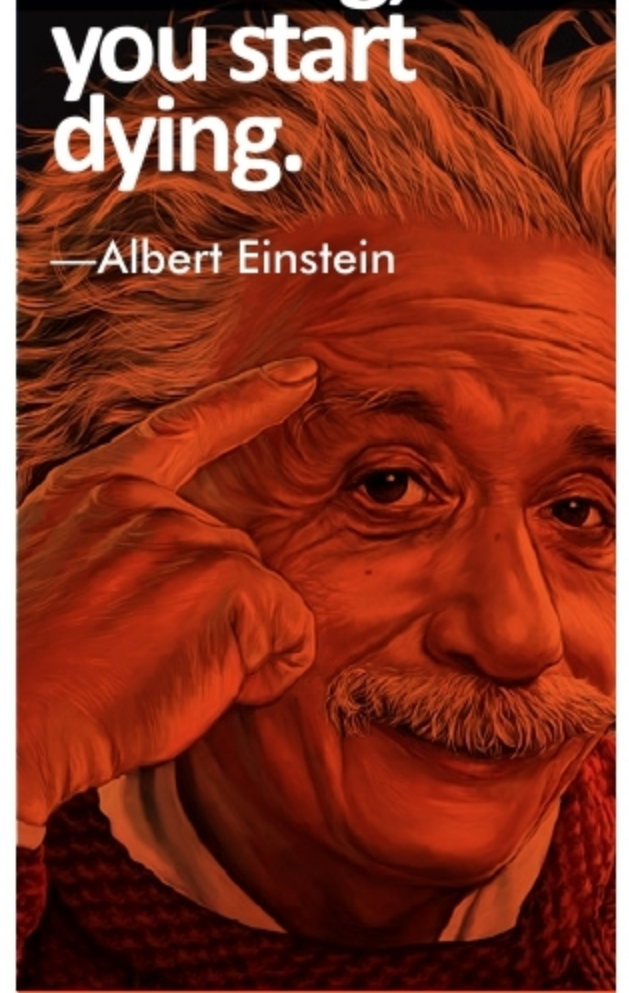

The two packs provide a complete LoRaWAN development chain including gateway and end-node boards, firmware and tools, leveraging ST's STM32 Nucleo evaluation boards. Catering separately for regions with 868MHz/915MHz/923MHz and sub-550MHz ISM frequency bands, each pack includes proprietary gateway software and ST's I-CUBE-LRWAN end-node software. The node and gateway boards come with an antenna and on-board debugger.
