Dragon Home

Visit: www.nuance.com

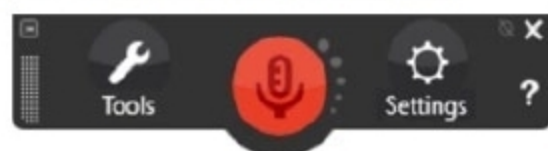

Full version: Paid

Dragon Home by Nuance is a speech-recognition tool for homes. It uses deep learning technology to accurately transcribe words into text at a much higher speed than average typing. The software has a user-friendly interface. Users can dictate their assignments, send emails, manage calendar appointments, navigate and chat on social media, browse the Web and so on. Playback feature enables easy proofreading and editing. Using Dragon Voice shortcuts, everyday multi-step tasks can be shrunk into voice commands. The latest version works with Microsoft Windows OS 7 and above.

On: Dragon is listening

Off: Dragon can't hear anything

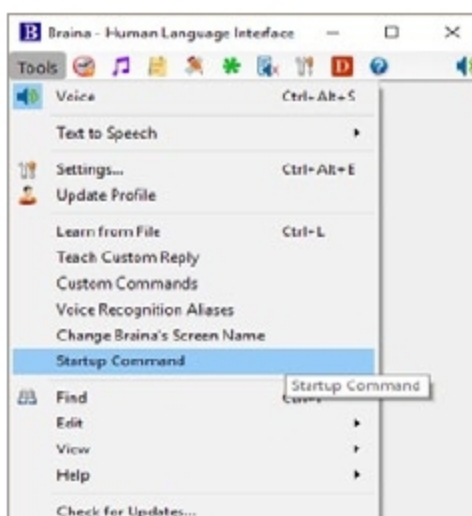

Braina Pro

Visit: www.brainasoft.com/braina

Full version: Paid

Braina (Brain Artificial) is an artificial intelligence (AI) software that works as a personal assistant application. Data is locally processed and stored on the system, which ensures privacy. Users can control their computer through typing or voice commands to perform such tasks as remote shutdown and reading emails. The software can convert speech to text in more than hundred different languages, on Windows PC or through an app. Other tasks include browsing the Web, playing songs and videos, setting reminders, solving mathematics problems, remembering notes, searching files and folders on the local device and so on.

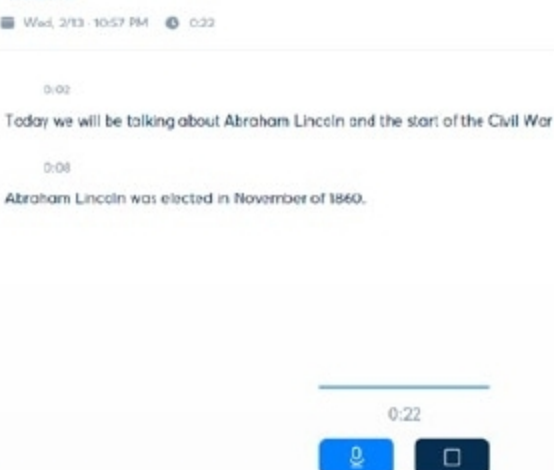

Otter

Visit: <https://otter.ai/login>

Full version: Paid

Otter allows users to record live conversations via app or browser, import or sync recordings from other locations, and quickly generate smart notes with audio, text, speaker ID, key phrases and images for lectures, meetings and other conversations in real time using artificial intelligence (AI). Options for searching, editing, playback, organising and sharing are available, which save time and money. Sharing among team members can be done by creating groups. The free plan offers 600 minutes of transcription per month. The latest version includes additional functionality for better collaboration.

Note

Transcribe

Visit: <https://transcribe.wreally.com/>; **Full version:** Paid

Transcribe is a secure way of accurately and quickly converting interviews, lectures, speeches, podcasts, audio notes and other similar recordings to text automatically, if there is negligible background noise. Otherwise, users can either dictate what they hear or transcribe manually but use tools to save time. Main features to improve efficiency include keyboard shortcuts, foot pedal integration for audio playback, automatic acronym expander, auto-saving and more. Its editor and audio player also work offline. Besides English, it supports other languages including Spanish, French and Hindi.
