

Air quality monitors

Protecting people from pollution

Purelogic Labs India, an initiative to increase awareness about air pollution in India, has launched a series of air quality pocket monitors. Prana Air by Purelogic Labs has launched Cair and Cair +.

Cair and Cair + measure air quality and air pollution in any environment and show all collected data in real time. With such newly-added functionalities

as Wi-Fi connectivity and SD card slot, the devices allow users to track air anywhere, anytime. All data is stored in the cloud and accessible through the mobile application, AQI India. Both monitors measure PM2.5, temperature and humidity along with

PM1 and PM10 (equational) with high-quality sensors, to check air quality.

In addition to the mentioned parameters, Cair + also measures carbon-dioxide and formaldehyde (HCHO) with dedicated sensors and total volatile organic compound (TVOC) (equational). All data is shown on the monitor's LCD screen in real time and in graphs, or through the mobile application where data is also stored. With the app, hourly, daily, weekly and monthly data can be accessed, and alerts can be set for different air quality levels to ensure safety when air pollution spikes.

Laptop

The world's smallest convertible

HP Inc. has introduced the next generation of Spectre x360 13 for the modern hyper-connected consumers in India who want to do more with technology. Premium design and craftsmanship, breakthrough performance and mobility, and strengthened security of this new Spectre device will push the boundaries for today's tech-savvy users who expect nothing less than exceptional computing experience.

The machine shows a reduction of thirteen per cent in size from last year's model, with a ninety per cent screen-to-body ratio at every angle, all while increasing power. Such features as 400-nit display, 4K OLED diagonal display with True Black HDR for a 100,000:1 high contrast ratio for

perfect blacks, anti-reflection display for outdoor viewing and factory colour calibration with Delta E < 2 for a thirty per cent wider colour range provides for amazing viewing experiences.

Integrated functionality with USB-C port placement angled in the right corner for improved cord management and power button on the left corner of the device to

avoid accidental power shut-offs are some of the other features of the device.

Home security camera

Supported by both iPhone and Android smartphones

Tenda has launched C80, an HD home security camera, in India. C80 is a portable security camera equipped with such features as night vision and motion alarm sensors that keep the home and belongings safe. It also comprises an inbuilt microphone and speaker for two-way audio communication.

Tenda C80 boasts of a 1080p HD lens with ten-metre infrared (IR) LED illumination distance, and supports 8x digital zoom for HD video recording, offering a wide-ranging view of 355° horizontal and 55° vertical coverage.

C80 comes with a storage capacity of 128GB; video recordings can be stored in SD/TF card for about 400 hours. The user can also opt for Tenda's cloud storage facility that comes with a free seven-days option.

The inside of the camera is equipped with Hi3518EV200 chipset for better performance. C80 is supported by both iPhone and Android smartphones. Teye app allows remote-viewing and sends instant notifications, too.
