### Windows 10 now lets users make phone calls directly from PC

Last year, Microsoft had launched a new app called Your Phone that syncs text messages, notifications and photos between a Windows PC and an Android phone. Now, the company is bringing a highly sought-after feature to the app, phone calls. The new functionality allows users to accept and make phone calls directly on the Windows PC without having to reach for the Android phone. It is a lot like macOS' Continuity feature and makes connection between devices seamless.

### Google's Messages app getting Verified SMS feature to help identify trustworthy business messages

Google is updating its Messages app by bringing a Verified SMS feature that will help users confirm the true identity of the businesses texting them. The new feature, which is rolling out in India and select other markets globally, is designed to highlight the authenticity of businesses on Messages app by verifying them on per-message basis. This will help users understand whether they should trust the messages they have received from a specific business or ignore it.

### Google Maps may soon add Lighting feature for safer night travel

To help users walk towards home safely, Google Maps is planning on adding a new feature to its service to highlight brightly-lit streets. The company is said to add a new layer to show streets with lighting to make users' commute safer. Streets that are lit will be shown in yellow colour to differentiate it from those streets that are dark. The feature was discovered in an APK teardown of the beta version of the app. It is unclear if Google will make it live in the public version.

### Facebook brings WhatsApp integration to its revamped crisis response tool

Social network giant Facebook is adding a WhatsApp button to its crisis response tool, its disaster-reporting and communications feature where a user requests or offers help during a time of emergency. The tool is being used in 300 crises in more than eighty countries presently. The new feature will allow people in affected areas to provide real-time information related to any disaster. Formerly, replies to requests on Facebook's crisis response pages could only be sent via Facebook Messenger.
