

How Smart Consumers Are Driving Smart Industries

To integrate systems and enable data sharing across them, well-defined standards and protocols are required. Global manufacturers must be aware of legal compliances in different countries where they operate while implementing changes

Necessity is the mother of all invention. From the light bulb to the Internet, this holds true for every invention and discovery in the past centuries. But in today's competitive market where there are so many options to choose from for each product, consumers are spoilt for choice. This decade has seen the fall of several businesses like Kodak that could not reinvent itself when people started growing exponentially on Instagram, Google's Orkut when other social networks like Facebook gained more popularity due to an interactive and user-friendly interface, and so on. In

simple terms, every business knows that consumers are the fulcrum for the success of any industry, but the ones who fail to meet growing customer expectations are the ones who lag behind.

Owing to quickly-changing consumer demands, innovative and fast-moving businesses are the need of the hour. Industries are undergoing a digital transformation that is capable of fundamentally altering the way factories and workplaces function. Technologies including Big Data analytics, artificial intelligence (AI), machine learning, cloud computing, the
