

Smart Home, Smart City And Smart Nation

Technology plays a crucial role in empowering smart citizens, strengthening smart societies, building smart cities and, ultimately, becoming smart nations

Sani Theo

What does the word smart mean, particularly when it comes to a smart home and a smart city? It is really confusing because smart could mean different things to different people. There are smart devices, smart light bulbs, smart meters, smart homes, smart citizens, smart society, smart cities, smart nations and so on. For example, some people think that a smart device should have the ability to communicate with other devices through a network like the Internet, while others think that it should have the capability to learn.

We often come across the word smart while talking to our friends, colleagues, watching TV or reading. It seems almost everything has become smart. Does this mean the world is becoming a smarter

place? Yes, application of smart solutions, and use of smart devices and digital technologies have made the world much smarter than before!

Let us take the example of lights in a hall. You manually set the brightness level of the light at various times of the day to reduce energy consumption. Do you think controlling the light with a remote is smart enough? What about making the device learn, so it can figure out what brightness level you want and when? A smart light can adjust the brightness automatically any time of the day, depending on the brightness level of the Sun and surrounding areas, to save energy.

If you want to change the brightness to zero per cent at, say, 10PM, the device figures it out by itself and does it for you. That is a smart device. Experts say that
