

Mapping The Growth Of R&D In India

Smart, new-generation technologies, such as the Industrial Internet of Things (IIoT), predictive analytics and smart automation is evolving the way we function. This change is expected to influence an extensive array of functions such as R&D, manufacturing and business support

Deepshikha Shukla

To perk up innovation for new-fangled services and products, companies spend billions on research and development (R&D), which also helps in enhancing the quality of existing products. Huge investments in this segment will improve the next generation of technology and play an imperative role in aiding companies resolve the impediments of adapting to legacy platforms.

Innovation also plays an important role in enhancing the capability of companies because it stimulates innovative methods of production and improves product quality. It benefits modern and upcoming businesses with unlimited growth and prospects in the years ahead.

India is the land of unlimited opportunities in business, which have been escalating

tremendously for the past few years. The nation is now furnished with a massive market opportunity, proactive government support, cost efficiency, technical competencies, and a highly scalable and low-cost workforce for companies setting up their R&D centres, which is also boosting investment and employment opportunities. Government incentives and such initiatives as Make in India, Startup India, NPE 2019 and FAME, along with augmenting policies, is helping increase the momentum of setting up R&D in India.

Smart, new-generation technologies, such as the Industrial Internet of Things (IIoT), predictive analytics and smart automation, are evolving the way we function. This change is expected to influence an extensive array of functions including
