

## AI In Military Service: Rules Sky, Land And Sea

With the use of artificial intelligence (AI) technology, modern electronics warfare has become more intelligent, effective, and precise in many ways. Leveraging AI technology in warfare equipment gives more advantages in the race towards modernisation of military equipment. This article covers the use of AI in military applications and on-going modernisation of Indian warfare equipment

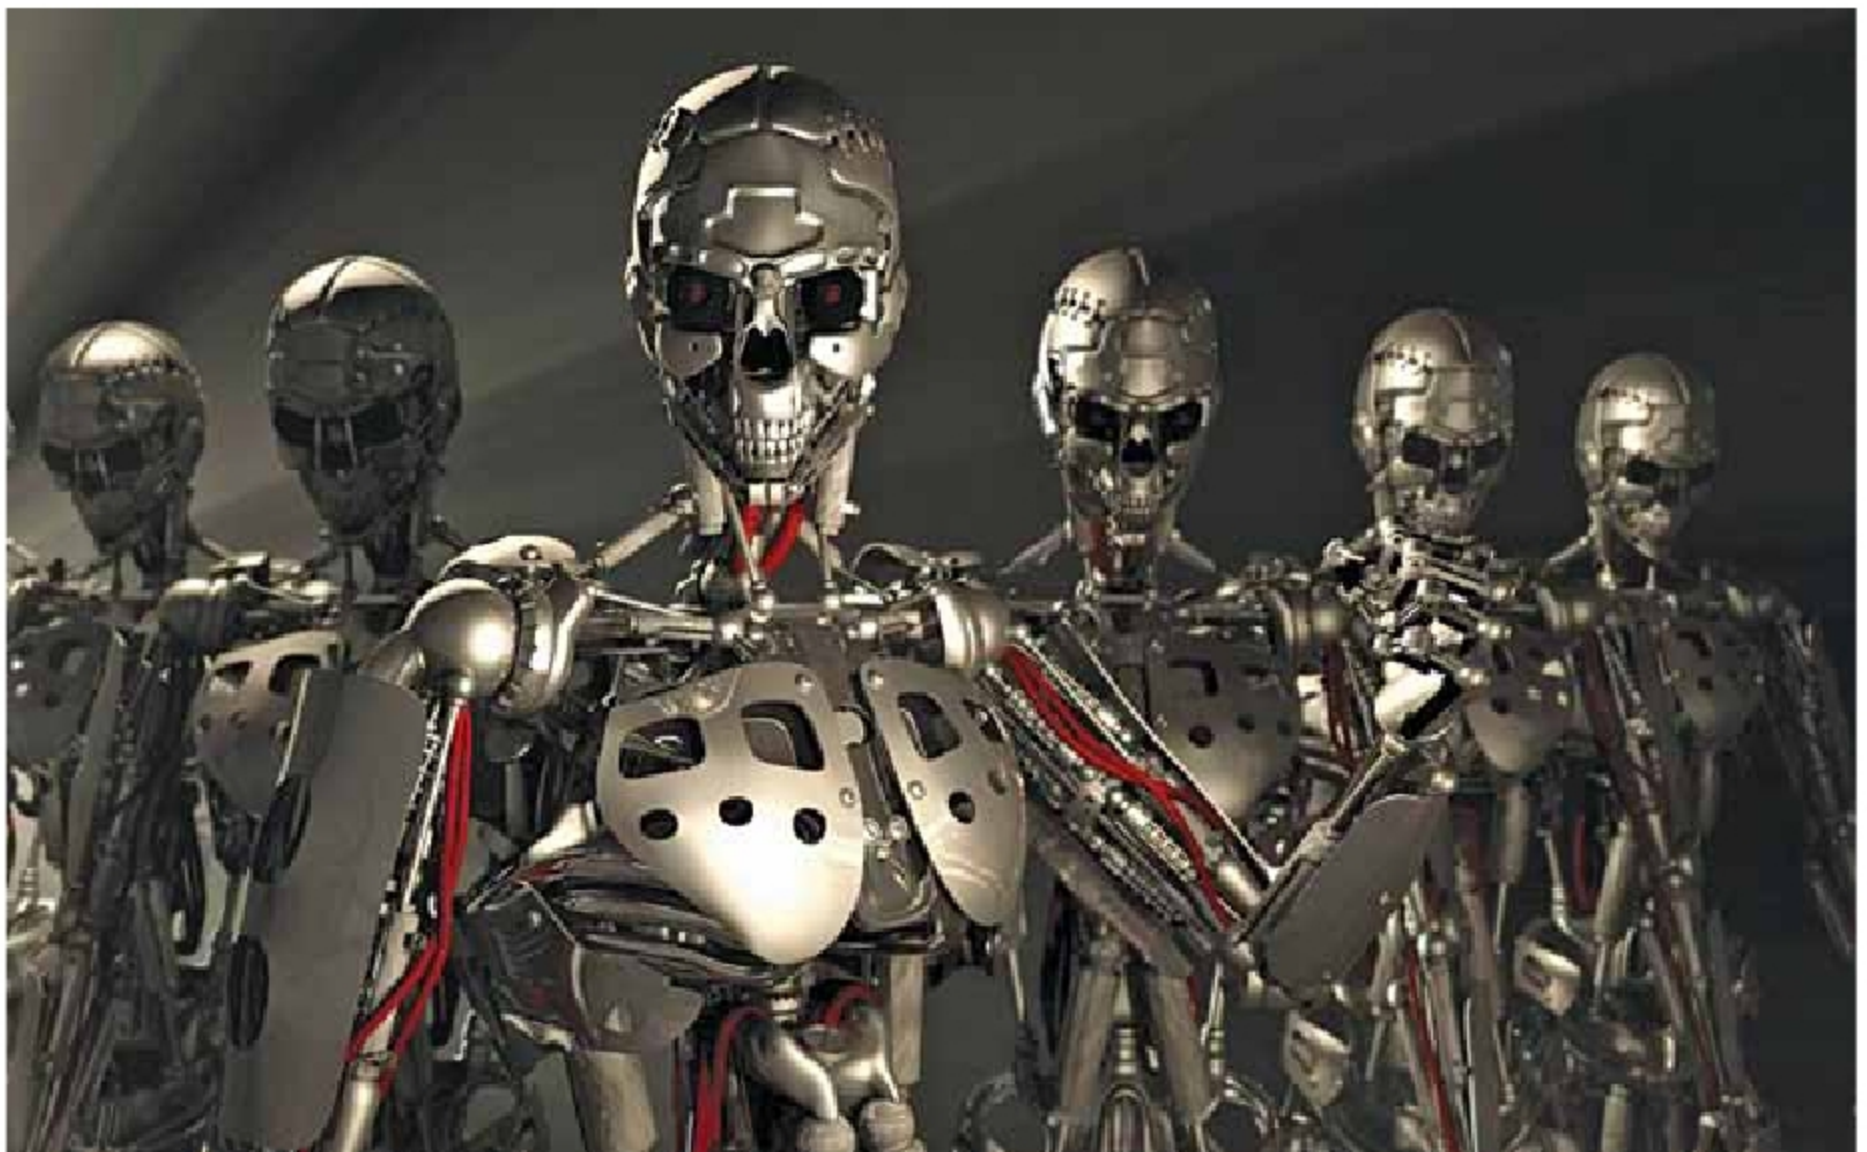

Sani Theo

A recently published book, *Army of None*, authored by Paul Scharre, talks about autonomous weapons, artificial intelligence (AI), and cutting-edge technology in modern warfare. Experts think that in future, wars will be fought by AI-based autonomous machines. However, it's difficult to predict whether humans will still be in charge of the deadly machines.

Looking back at the history of warfare

revolutions, modern warfare is unique, lethal, and much more destructive than ever. You may refer the 'AI In Defence: The Warfare Revolution 3.0' article published in EFY July 2019 issue, which talks about various warfare revolutions in the history of mankind.

Modern warfare is part of the third revolution that uses drones, unmanned aerial vehicles (UAVs), and AI. With the use of
