

Refrigerators

With AI-enabled technology

Panasonic has launched a new range of artificial intelligence (AI) enabled refrigerators in India. The new refrigerator range has three types of sensors.

The door sensor senses how frequently the door is opened to understand a family's needs to automatically switch between the power saving mode to other power modes. The temperature sensor detects the internal and external temperatures to determine and adjust to the required cooling power without human intervention. The light sensor, on the other hand, adjusts the temperature as per ambient light.

Additionally, these refrigerators come with AG Clean technology, which the company claims can deactivate up to 99.9 per cent of bacteria to keep food fresh and healthy. The new range comes with twenty per cent extra storage space with a 35-litre vegetable box.
