

Drones Market Still Nascent But Rapid Growth Likely

Drones/unmanned aerial vehicles are now being used in several commercial applications such as news coverage, delivery of goods and environmental monitoring. Amidst the outbreak of the Covid-19 pandemic, the use of drone technology has increased in government organisations such as defence and police force, but their demand can increase exponentially for e-commerce and logistics

With the massive popularity and development of unmanned aerial vehicle (UAV) technology over the past few years, the Directorate General of Civil Aviation (DGCA) has taken several initiatives to introduce drones in the commercial air space. With this step, the deliveries by drones have gained momentum over the past couple of years. Solutions by drones are now applied in various sectors,

for commercial purposes, and also by the government in their defence space. Currently, the DGCA has approved the manufacturing of drones by only a handful of companies. Hence, the number of logistic firms using drones is still less.

Drones are at present being tried across numerous commercial applications such as news coverage, emergency services, delivery of goods, Wi-Fi access,
