

Delhi Electric Vehicle Policy

Following are the key provisions under Delhi Electric Vehicle Policy 2019

BACKGROUND

- The draft Delhi electric vehicle (EV) policy was put in public domain for inviting comments and suggestions on November 27, 2018, in response to which wide-ranging suggestions were made by various stakeholders including international and national think-tanks, non-profits, experts from academia, EV manufacturers, battery manufacturers, multilateral bodies, and concerned individuals.
- A day-long Stakeholder Consultation event was also held on December 18, 2018, by Dialogue & Development Commission of Delhi (DDCD). The consultation was inaugurated by Hon'ble Chief Minister and Hon'ble Minister Transport, and saw in-depth discussions from over 200 participants from across the country on thematic areas such as charging infrastructure, two-wheelers, three-wheelers, industry perspectives and citizen perspective on the draft Delhi EV policy.
- On June 26 and 27, 2019, Delhi government organised Urban Mobility Lab in Delhi with a special focus on identifying obstacles and collaboratively designing solutions to enable innovative start-ups in e-mobility space take off in Delhi.
- Based on various comments and suggestions received through the above multi-staged process, and keeping in mind the developments in FAME India Phase II scheme at the national level, the final draft of Delhi EV policy 2019 was prepared.

GOAL AND IMPACT

- The primary goal is to improve Delhi's air quality by bringing down emissions from the transport sector. To do so, this policy will seek to drive rapid adoption of battery electric vehicles (BEVs) such that they contribute to 25 per cent of all new vehicle registrations by 2024.
- The policy particularly focuses on electric two-wheelers, shared transport vehicles (for example, three-wheelers/buses) and goods carriers/ freight vehicles, since they contribute to majority of the vehicular pollution. Currently, electric two-wheelers contribute only 0.2 per cent of annual two-wheeler sales, electric cars contribute to 0.1 per cent of car sales and sales of electric three-wheelers (autos/goods carriers) are almost NIL.
- Within a year, Delhi government is targeting the induction of 35,000 electric vehicles (two/three/four-wheelers and buses), 1000 EVs for last mile deliveries and 250 public charging/ swapping stations to come up in Delhi.
- In the next five years, Delhi government is targeting to put 500,000 new EVs register in Delhi due to this policy. Over their lifetime, these EVs are estimated to avoid approximately sixty billion rupees in oil and liquid natural gas imports and 4.8 million tonnes of carbon-dioxide emissions, which is equivalent to avoiding carbon-dioxide emissions from nearly 100,000 petrol cars over their lifetime. They will also help avoid about 159 tonnes of PM 2.5 (fine particulate matter) tailpipe emissions.
- Delhi government's vision is to make Delhi the EV capital of India.

TWO WHEELERS

- Purchase incentive of ₹ 5000 per kWh of battery capacity. For an average electric two-wheeler with 2kWh battery, applicable incentive would be approx. ₹ 10,000 as compared to ₹ 5500 presently being offered by DPCC as subsidy for battery electric vehicles.
- Scrapping incentive of up to ₹ 5000 to be offered subject to evidence of matching contribution from the dealer or OEM.
- For the first time in Delhi, ride-hailing service providers will be allowed to operate electric two-wheeler taxis, which will be a big boost to clean last-mile connectivity.
- All two-wheelers engaged in last-mile deliveries (for example, food delivery, e-commerce logistics, etc) will be expected to transition fifty per cent of their fleet to electric by March 2023, and hundred per cent of their fleet by March 2025.

ELECTRIC AUTOS (E-AUTOS)/E-RICKSHAWS/E-CARRIERS

- Purchase Incentive of ₹ 30,000 per vehicle (nil at present).
- Interest subvention of five per cent on loans and/or hire purchase scheme for the purchase of an e-auto. So a loan of typically twelve per cent interest from DFC will now be made available at seven per cent—the lowest anywhere in India for EVs.
- For e-autos, open permit system will apply for individuals who will be given permits on a first-come-first-serve basis, subject to the cap of maximum number of autos permissible in Delhi as per SC orders.
- e-Carriers will be completely exempt from the prohibition on plying and idle parking of light goods vehicles on identified roads of NCT of Delhi during specified timings.

FOUR WHEELERS (E-CARS)

- Purchase incentive of ₹ 10,000 per kWh of battery capacity for first 1000 cars subject to a cap of ₹ 150,000 per vehicle.
- All leased/hired cars used for commute of GNCTD officers will be transitioned to electric within a period of twelve months from the date of notification of this policy

BUSES

- Subsidy as decided by GNCTD from time to time with a commitment that pure electric buses shall constitute at least fifty per cent of all new buses (including smaller buses for last mile connectivity) to be added to the city bus fleet.

ACROSS ALL VEHICLES

- All financial incentives will be applicable for both fixed-battery and swappable-battery models. Delhi EV policy is technology agnostic and encourages innovation in all technologies.
- Road tax and registration fees to be waived for all BEVs during the period of this policy.
