EFY BUREAU

AutoNet DMS

Visit: www.emsys.solutions

Full version: Paid

AutoNet dealer management system (DMS) is a centralised platform that offers complete automation of routine tasks in automobile businesses. It has modules for vehicles, spare parts, accounts, marketing and so on. Inventory is automatically integrated as soon as a transaction takes place. Analytical comparison of marketing activities helps in better decision-making. With e-mail and SMS integration, users can receive service and appointment reminders. Option for getting consolidated reports related to daily sales, spares, service and more is also available. Customer data is not accessible by third parties to ensure security.

GetAFix

Visit: <http://evenforce.com>

Full version: Paid; free trial

GetAFix is an easy-to-use software-as-a-service (SaaS)-based end-to-end automotive solution that offers inventory management, financial accounting, sales management, billing options, MIS reports and more. Inbuilt barcode scanner ensures inventory data gets stored accurately. Invoices can be generated with several tax methods. Time and money for recorded service requirements can be estimated. Users can view automobile service record history of any workshop using the software. WhatsApp/SMS/email facility allows easy customer interaction. The software saves time, and improves productivity and efficiency, which boosts revenues. It supports multiple languages including English, Arabic, Hindi, Gujarati, Malayalam and Spanish.

Greenlots SKY

Visit: <https://greenlots.com>

Full version: Paid

Greenlots SKY EV charging network software simplifies management of electric vehicle (EV) charging stations for commercial (utilities, smart cities, offices, automakers) and residential charging (apartments, homes). Information regarding status and performance of each station can be viewed separately. Other features include fault notifications, charging utilisation data, payment tracking, maintenance reminders and customised reports, among others. Charging sessions can be controlled in real time, and pricing structures can be set flexibly depending on usage, time and session. Drivers get real-time updates, options to start or stop charging remotely, and more through the app.

Driivz

Visit: <https://driivz.com/#platform>; Full version: Paid

Driivz is a scalable and modular cloud-based platform that has modules for electric vehicle (EV) operations and network management, energy management tools, customisable billing functionality and driver apps. Automatic energy balancing protects the existing grid system and maximises network performance. The software has a user-friendly interface and ensures easy RFID/token management. Automated self-healing algorithms increase efficiency of managing operations. Data analytics and real-time monitoring tools provide transparency. Drivers get access to charger locations, tariff information in real time, reserve-ahead as well as payment options.
