

Fitness band

Youthful design meets ergonomic comfort

Like a stylish splash of colours, HUAWEI Band 4 is available in Sakura Pink, Amber Sunrise and Graphite Black. The 2.5D colourful touch screen offers a stunning visual experience, engaging interface and smart message notification. HUAWEI Watch Face Store offers various watch faces in different styles of sports, cartoons, intelligence and hi-technology for user's selection.

The built-in USB plug of HUAWEI Band 4 fits in general USB chargers so it can be charged anywhere and anytime. A single charge powers the band with more than six days of usage time.

Thanks to professional optical devices, processing chips and artificial intelligence (AI) algorithm, HUAWEI TruSeen 3.5 monitors the heart rate with accuracy. It also provides intelligent reminders via vibrations if heart rate exceeds maximum average heart rate.

In night mode, invisible light ensures less distraction for better sleep. HUAWEI TruSleep 2.0 tracks heart rate during sleep to recognise the four phases and analyse sleep quality. More than identifying six types of sleep problems, it also provides suggestions to help the user enjoy better sleep.

Telegram introduces Polls 2.0 to enhance chat experience

Telegram, a cloud-based mobile and desktop messaging app, has announced addition of new and exciting features for conducting various types of polls within chat groups and channels. Termed as Polls 2.0, users can now explore three new kinds of Telegram Polls, namely, Visible Votes, Multiple Answers and Quiz Mode. Polls 2.0 aims to enrich the learning experience, giving users more options to engage and express their opinions by way of selecting from various options. This new feature can enhance the experience of users to create opinions, generate polls, and be used by learning and education channels to create objective-based learning through multiple choice questions (MCQs) and subject-based quizzes.

Sophos introduces Intercept X for Mobile

Sophos has introduced Sophos Intercept X for Mobile with new security capabilities for Chrome OS devices and improved mobile threat defence for Android and iOS devices. Leveraging the same deep learning anti-malware technology used in Intercept X for Windows, macOS and server, Intercept X for Mobile protects users, their devices and their data from known and never-before-seen mobile threats. A completely redesigned interface simplifies security management and aids accessibility for users with disabilities.

Google's chatbot Meena aims to bring human touch

Google has in store something more conversational than the existing Siri, Alexa and Cortana in the form of its new chat companion, Meena. As per Google, Meena is a neutral network that has about 2.6 billion parameters. As per Google's blog, Meena, a multi-turn open domain chatbot, is trained end-to-end on data mined and filtered from public domain social media conversations. This 2.6-billion parameter neural network is trained to minimise perplexity, an automatic metric that they compare against the human judgement of multi-turn conversation quality. The post also states that Meena is trained on forty billion words and uses a seq2seq model along with a variation of the popular Transformer architecture.

DJUBO revolutionises the hotel self-check-in experience in India

To ease the guest check-in experience at hotels, DJUBO, a cloud-based PMS platform, with all hotel technology verticals built into a single platform has announced the launch of DJUBO Xpress, an iPad-based self-check-in app, which enables guests to just walk in, use a self-check-in kiosk, issue room key cards and walk into the room with zero human intervention. Guest check-ins involve several steps like signing up a guest registration form, guest ID validations and maintaining records. In addition to these, the front office needs to keep in mind factors like coordination with housekeeping to ensure rooms are ready, check-in time of guests, any outstanding balance that needs to be collected at the front office and so on. All these are critical aspects, which are taken care by DJUBO Xpress.

Barco launches ClickShare Conference to enable next-gen wireless conferencing at workplace

Barco India has launched its next-generation wireless conferencing solution, ClickShare Conference. The new launch is based on the concept of BYOM (bring your own meeting), as it takes away all friction points related to hosting video conferences from one's own device. Whether used in huddle spaces, meeting rooms or boardrooms, ClickShare Conference works seamlessly with any video-conferencing software, camera brand, laptop and most importantly makes remote meetings as intuitive as having a face-to-face meeting. The new range includes three models: entry-level CX-20, CX-30 and high-end CX-50, and provides users freedom to choose how they collaborate securely as the solution is triple-agnostic. They can join the meeting using any device from anywhere while enjoying all familiar benefits of unified communication or video-conferencing tools and AV USB-peripherals available in the room.
