

MY STORY

My Story article titled 'It was my dream to set up the largest electronics set-top box manufacturing plant within India' published in February issue was interesting! I agree with the last part of the article that says, "My advice to the new entrepreneurs is to begin a startup with some innovative technologies because the old or existing technologies are on the verge of being phased out. So if they do the same thing that the others are doing, then there is not going to be any growth or appreciation."

EFY. Thanks for the feedback!

PARANORMAL MANIFESTATIONS

This is regarding the article 'The Electronics of Paranormal Manifestations' published in January issue. I would like to equate the three kinds (physical and non-physical) of body systems mentioned in philosophical schools of thoughts, namely, *sthoola*, *sooksheema* and *kaarana shareeraas*, to their scientific kinds with mechanical, electrical and electronics, respectively.

My feeling is that when a spiritually-evolved person dies, his or her *kaarana shareera*, or electronics body, somehow paves the way for new inventions, discoveries, sciences, etc, by living men. But tracing the link between that evolved soul and the living inventor seems difficult for now.

V.N. Ramaswamy
Hyderabad

The author Dr S.S. Verma replies:
I agree that paranormal manifestations may be stronger with a spiritually *kaarana*/electronic body, but such type of manifestations may always happen with other *kaarana*/electronic body also. The context of the article was not to discuss the origin of paranormal manifestations but only to discuss the developments in

science and technology of electronics to be able to detect such manifestations. However, you have rightly said that tracing the link between the evolved soul and living inventor seems difficult as of now.

MY SUGGESTIONS

It would be great if someone could write articles on the following two topics:

Aluminium air batteries. Indian Oil Corp. is working with an Israeli company for the R&D and production of these batteries. Here, aluminium is used as anode, air as cathode and water as electrolyte to produce electricity. India has enough aluminium ores. These can replace lithium-ion batteries in the future. India will no longer need to import lithium/lithium-ion batteries; rather, India will be in a position to export them.

Graphene carbon batteries. Mechatronics engineers from Mumbai have started a company for such batteries. They claimed that graphene batteries can be charged hundred per cent within fifteen minutes and can, thus, replace lithium/lithium-ion batteries in the future. India has abundant graphene/carbon/coal for production of these batteries.

WANT TO PUBLISH MY ARTICLE

I would like to contribute an article to EFY. Kindly suggest the process. Accordingly, I will share the articles for your kind perusal.

Gaurav Kumar
Project Lead
Vincular Testing Labs India Pvt Ltd

❑ How can I publish my article/project in EFY magazine?

Mihir Dave

EFY. Thanks for getting in touch with

us! We are glad that you wish to publish your article(s) in EFY. Please forward the article(s) in editable doc. format with high-resolution screenshots, images, etc to editsec@efy.in

In case of DIY article(s), please send the circuit diagram and source code files of the project, too. Also, share your complete byline, including your interests, along with your complete postal address.

For detailed guidelines, please visit www.electronicsforu.com/guidelines. These guidelines will help you structure the article(s) as per our editorial requirements.

Acceptance or return of the article(s) will be decided after review by our editorial team.

...

ARTICLES ON DEFENCE

I am a regular reader and a contributor to EFY. I have come across many articles on defence, weapons and working principles in earlier issues. Please continue to publish such articles in coming issues.

Pamarthi Kanakaraja

EFY. Thanks for the feedback! We will try to include topics related to defence and allied subjects in coming issues.

IoT-BASED MOTION DETECTOR

I am working on 'Build An IoT-based Motion Detector Using Cayenne' DIY article published in December 2019 issue. However, I am getting a connection error. Please help.

Murali Kumar

The author Rahul Tribhuwan replies:
This problem occurs when you enter the wrong COM port while executing batch file command at command prompt. The solution is to enter the correct COM port and run the command prompt again. You can check the correct COM port to which Arduino board is connected either from Arduino IDE or Device Manager on Windows machine.
