

AI In Modern Logistics, Transportation And Smart Roads

Logistics is a vital part of every business model. It forms an important part of the supply chain that involves planning, implementation, forwarding and reversing the flow of goods, services and related information from the origin to the recipient. Artificial intelligence (AI) is revolutionising logistics and supply chain management in a big way

Sani Theo

If you think logistics is simple, think again! Your logistics strategy reflects your brand, sales and profits. Ensuring delivery of the right products/goods and the right quantity to the right customer at the right time is not always easy, unless you have good logistics management in place. It involves man-

power, inventory, technology, laws, taxes, permissions and other elements. Jeff Bezos of Amazon and Jack Ma of Alibaba are currently among the richest men in the world, and one of the reasons of their success in the business is that they have very good logistics and supply chain management systems.
