

Opportunities And Forecasts In EV Market

World Economic Forum recently released a report on the electric vehicle (EV) ecosystem stating India has the potential to become the largest EV market in the world. But the role of the government is crucial for accelerating adoption in addition to long-term investment in research and development (R&D) to create sustained growth

Transportation is majorly responsible for escalating pollution and global warming at a massive level. To combat pollution and greenhouse emissions, auto companies and scientists have come up with the concept of electric and hybrid vehicles,

which have gained massive traction globally. According to auto experts, electric cars have zero carbon emissions and with their on-road augmentation, there can be a cleaner atmosphere, thereby leading to fewer pollution-based diseases
