

speed limit? Could it be the case of an emergency where you had to break the rule? Only by understanding why it would make more sense in such cases. But it is quite possible that your insurance company may not even ask you about this and decline the cover.

When AI systems do not know why, there is always going to be a lurking risk of discrimination, bias, or an illogical outcome.

Right solution - wrong hands

I always say that tools and systems are not hurtful; people using them are! The thing with technology is that, if you learn to use it, it works for you. But 'who' you are will decide 'how' you use it.

Notably, the interface between humans and AI systems is one of the risky areas. Not just during the use of the systems, these risks are prevalent in preliminary stages of AI training, too. Coding errors, lapses in data management, incorrect model-trainings, etc can easily compromise critical characteristics of AI solutions such as bias, security, compliance, etc.

Not to forget risks from disgruntled personnel getting hands on these systems, and being able to corrupt systems' functioning in some way or the other. Weapon systems equipped with AI are the most vulnerable to the right AI in wrong hand problems, and therefore have the greatest of risks.

Again, we are not talking about AI systems turning evil. Instead, the concern is someone misusing a powerful AI system. The possibility of AI systems being used to overpower others by some group or a country is one of the significant risks. Overall, the risk of the right AI in the wrong hands is one of the critical challenges and warrants substantial attention to avoid it.

The grey matter - use it or lose it!

Extending AI and automation beyond logical limits could potentially alter our perception of what humans can do. Several decades ago, doing a math calculation by hand on a piece of paper was a highly appreciated skill for human beings. Now, with the advent of calculators and computers, we don't

see much value in that (skill) any more.

We still value human interaction, communication skills, emotional intelligence and several other qualities in humans. What happens when an AI app takes over? What happened to AI doing mundane tasks and leaving time for us to do what we like and love?

There is a high risk that, eventually, several people would resign from their intellect and sit on sidelines, waiting for their smartphone app to tell them what to do next, and how they might be feeling now!

When we invented automatic cars, an upgrade from manual gear shift cars, we almost lost hand-leg-brain coordination that was once important. It is not just a matter of coordination per se; it is the matter of thinking, which is what humans do and are good at. Aren't we?

The enormous power carried by the grey matter in our heads may become blunt and eventually useless, if we never exercise it, turning it into just some slush. The old saying, "use it or lose it" is explicitly applicable in this case. **EFY**

Most Trusted[#] Electronics Industry Directory Up For Grabs!!

- 10,000+ Electronics Organisations
- 2,800+ Product Categories For Buyers
- Key Government Organisations Related to Electronics
- Key Industry Associations Related to Electronics

Verified Data

ORDER FORM

Name _____ Organisation _____

Mailing Address _____ City _____

Pin Code _____ State _____ Phone No. _____ Email _____

I would like to book **Electronics Industry Directory 2020**. Please find enclosed a sum of Rs. _____ by DD/MO/crossed cheque bearing the No. _____ drawn on (bank) _____ in favour of **EFY Enterprises Pvt Ltd**, payable at Delhi (Please add Rs 50 for non-metro cheques)

Fill in the photocopy of this form and send it to: **EFY Enterprises Pvt Ltd**, D-87/1 Okhla Industrial Area, Phase 1, New Delhi 110 020 Ph: 011-40596600 or E-mail: support@efy.in
