

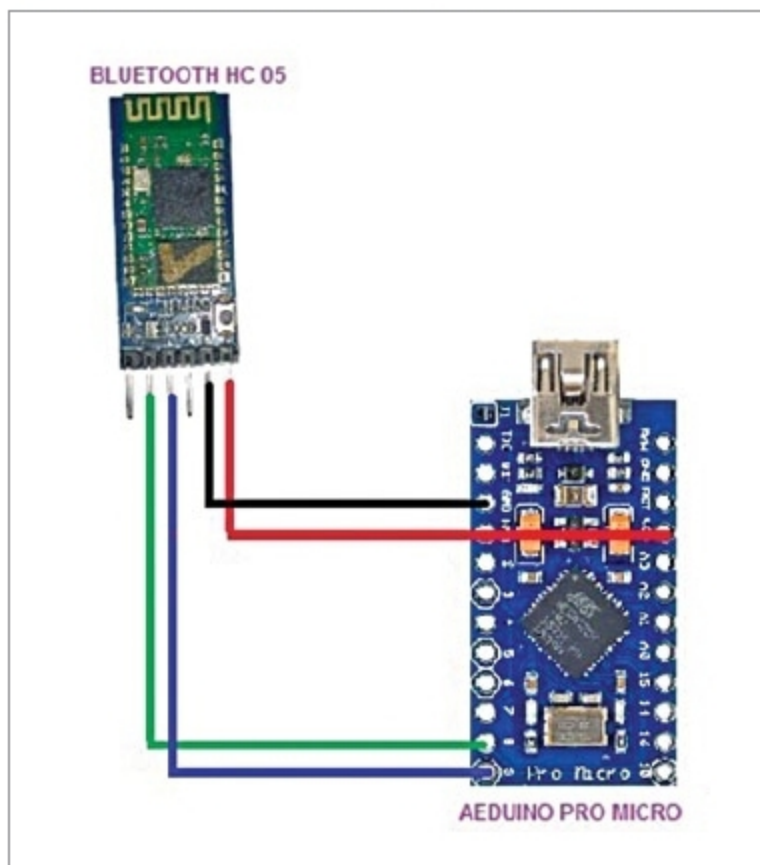

Fig. 8: Arduino Pro Micro connections (receiver)

connected to pins A0 through A3 of Arduino Pro Mini, respectively. Switch S1 is for mouse right click, S2 for mouse left click, S3 for paste and S4 for copy function.

between transmitter and receiver units. Use pushbutton switches (S3 and S4) to operate functions like copy and paste on your computer. You can also do some awesome tricks with

Now we will connect Arduino Pro Micro with Bluetooth as shown in Fig. 8. Arduino Pro Micro pin-to-pin connections with Bluetooth are shown in Table 2.

Next, we need to upload the code to Arduino Pro Micro. For that open Arduino IDE, select the board, COM port and press Ctrl + U to upload the code. Similarly, upload the code to Arduino Pro Mini after selecting the appropriate board.

Congrats! The wireless HID mouse is ready for use. First, make sure that the receiver unit is attached to your computer through a USB port. Keep a distance

it—you can attach the transmitter unit on your hand or any toy gun and enjoy the real shooting game experience using switches S1 and S2. You can also attach the device on the tip of a plastic knife and play vegetable cutting game with it. Use switch S1 for actions such as shooting and cutting vegetables. Use switch S2 for additional functions such as selection and highlighting objects in video game applications. **EFY**
