

Production linked incentive scheme for electronics manufacturing

In a bid to improve and strengthen the indigenous manufacturing of electronics in India, the government has approved a production incentive scheme (PLI) for large scale electronics manufacturing. The scheme includes incentives for players manufacturing mobile phones in India. It also encompasses specified electronic components including assembly, testing, marking and packaging (ATMP) units.

The India Cellular and Electronics Association (ICEA) last year had pointed out that there were around 268 mobile phone manufacturing units operating in India. The value of electronics produced in India, as per government, had reached ₹ 4580 billion in 2018-19 from ₹ 1903 billion in

2014-15 at a compound annual growth rate (CAGR) of about 25 per cent.

The total cost of the proposed scheme, as informed by the government, is approximately ₹ 409.95 billion. This figure includes an incentive outlay of approximately ₹ 409.51 billion and administrative expenses of around ₹ 0.44 billion.

Interestingly, India's import of electronics products has been on a sharp rise since 2011. While the figures were around one trillion rupees in 2011, the same for the year 2019 stood at around four trillion rupees. Sourced from *Statista*, the report mentions that these imports included computer hardware, consumer electronics, electronic components and instruments, and telecom instruments.

Assistance for modified electronics manufacturing clusters

Aimed towards improving electronics manufacturing in the country, the Union Cabinet chaired by Prime Minister Narendra Modi has approved financial assistance to the modified electronics manufacturing clusters (EMC2.0) scheme. The scheme, as per the government of India, works towards the development of world-class infrastructure along with common facilities and amenities through electronics manufacturing clusters (EMCs).

India's electronics production has increased from ₹ 1903 billion in 2014-15 to ₹ 4580 billion in 2018-19, at a CAGR of about 25 per cent. India's share in global electronics manufacturing grew from 1.3 per cent (2012) to three per cent (2018). It accounts for 2.3 per cent of India's GDP at present.

The modified EMC 2.0 scheme, as the government informed, would

support setting up both EMCs and common facility centres (CFCs). Government expects that these EMCs will aid growth of the electronics and semiconductor manufacturing (ESDM) sector, help in development of the entrepreneurial ecosystem, drive innovation and catalyse the economic growth of the region by attracting investments in the sector, increasing employment opportunities and tax revenues.

The scheme, as per the government, will provide financial assistance of up to fifty per cent of the project cost subject to a ceiling of ₹ 0.7 billion per hundred acres of land for setting up of EMC projects. The total outlay of the proposed EMC 2.0 scheme is ₹ 37.62 billion. It includes financial assistance of ₹ 37.25 billion and administrative and management expense to the tune of ₹ 0.37 billion.

ON THE move

Konica Minolta appoints Tai Nizawa as MD

Konica Minolta India has appointed Tai Nizawa as managing director. Nizawa is an industry veteran with over 30 years of experience in the printing industry. He has been associated with Konica Minolta since 1987. Before moving to this role, Nizawa worked as MD at Konica Minolta Vietnam. He has also worked with the brand in Osaka, Germany, New Zealand, Tokyo, Netherlands, UAE, and the US. Nizawa will be currently responsible for creating a strategic roadmap and leading day-to-day operations for the Indian business.

Danlaw appoints Sirish Batchu as new MD

Danlaw has announced the appointment of Sirish Batchu as the company's new managing director. Sirish has over 28+ years of experience across the automotive and IT industries especially in OEMs and EV segments in India. Before Danlaw, Sirish was associated with several firms including Bosch, Mahindra & Mahindra and Ather Energy.

NEC Technologies India appoints new CEO

NEC Corporation and NEC Technologies India have appointed Aalok Kumar as the new president and chief executive officer (CEO) of NEC Technologies India. With this appointment, Takayuki Inaba, former chairman and managing director, has been appointed as executive chairman of NEC Technologies India. In collaboration with local government authorities, NEC is working on a number of smart city projects as well by setting up digital command and control centres for traffic management and public safety.

Awards

Mouser Electronics honoured with Awards from Neutrik USA

Mouser Electronics, Inc. has been honoured by Neutrik USA with three top awards for 2019 performance—Distributor of the Year, Top Revenue award and Outstanding Performance of the Year award. Neutrik is the leading provider of professional audio, video, and lighting connector systems. Mouser received the awards based on Neutrik's rigorous criteria, including overall sales performance, personnel relationships, on-time delivery and quality of inventory.
