

Oscilloscope

Keysight Technologies has announced a new cost-effective and flexible single-channel instrument that has been specifically designed to accelerate the development of next-generation mmWave communications, satellite communications and radar applications.

The UXR0051AP Infiniium UXR-series oscilloscope, the newest addition to the company's UXR series of oscilloscopes offers a frequency range of 110GHz

and 5GHz and provides a fast, affordable, and flexible analysis of wideband measurements. It also offers flexible mmWave extension, and DDC bandwidth license options enable performance and affordability for oscilloscope based mmWave wideband analysis.

PIM analyser

Anritsu has launched the IQ Fiber Master MT2780A multi-port CPRI based RF and PIM analyser that can perform true PIM analysis over fibre and

RF spectrum results of IQ data. The MT2780A reduces test costs and

time by providing field engineers, field technicians, and third-party contractors a single instrument to conduct RF interference measurements and PIM troubleshooting on LTE-based systems using CPRI front haul infrastructure.

The IQ Fiber Master provides a full PIM diagnosis, such as reporting the presence of PIM, whether it is internal or external, and the distance to PIM. Also, the unique and proprietary PIM heat map instantly displays which transmitter contributes the most PIM. For on-going monitoring, IQ Fiber Master can be installed at cell sites to conduct long-term PIM over CPRI measurements and provide analytical information.

Video analyser and generator

Teledyne LeCroy has announced the availability of the quantumdata M42d Video Analyzer and Generator, the industry's first DisplayPort 2.0 protocol test

instrument. This allows designers and test engineers

to conduct interoperable testing with other test devices.

The DisplayPort 2.0 provides data rates of up to 20Gb/s per lane for an overall aggregate bandwidth of 80Gb/s. This goes well beyond the DisplayPort 1.4 standard's aggregate rate of 32.4Gb/s. These data rates support high screen resolutions of up to 16k with a 60Hz refresh rate. The M42d incorporates built-in passive probing based on Teledyne LeCroy's state-of-art T.A.P.4.

Quantumdata M42d system supports both source and sink testing at new data rates and line coding, as well as enhanced capabilities like LTTTPR emulation and panel replay.

Signal and spectrum analyser

Users of R&S FSV signal and spectrum analyser and R&S SMBV100A or R&S SGT 100A vector signal generator can now do field-to-lab testing using the

R&S IQW100. They can record signals acquired by the analyser in any environment and then replay them using the generator. These acquired signals are transferred and stored in the R&S IQW100 using the standard digital I/Q interface available with selected R&S equipment.

To regenerate the recorded signal, the data is again transferred using the same standard R&S digital I/Q interface to the signal generator. Signals with a maximum bandwidth of 160MHz, with a sampling rate up to 200 MS/s are supported. These are suitable for all WLAN/WiFi signals and all mobile standards.

MISCELLANEOUS

BoM Scrub Tool

BOM Scrub tools launched by LionCircuits is a free software which helps in refining BoM/electronic parts search

while giving the flexibility to compare prices and stock availability in

real-time from various global suppliers. This tool allows people to select components which suit their design specification without compromising on quality and lead times.

In addition, it offers the use of latest supply chain tools and helps with procurement in an hour instead of days.

BoM scrub tool allows to source high quality, reliable components from global suppliers by managing all the custom clearance and global shipments handling. Customers can track their shipments on the dashboard until delivery.

CoronaOven

Log 9 has developed a proprietary device for completely neutralising Covid-19 and other pathogens on surfaces of various products in demand during this outbreak. This includes masks, hospital PPE and tools, groceries, etc.

This can kill the virus in less than ten minutes on all types of surfaces. System is specifically designed to ensure complete kill of coronaviruses. The company is retailing this in two options. The plug-in model is priced at ₹ 7,999, while the battery compatible model is priced at ₹ 13,999.

This device, by eradicating coronavirus and other pathogens, might help in reusing equipment including masks, gloves and adequate protective gears used by medical professionals and authorities. People might also find a use of these at shops and inside their houses.
