

SMART PEN: A SMART THING TO ENHANCE NOTE-TAKING SKILLS

Potshangbam July

High-tech gadgets have been speedily replacing or getting rid of the traditional models of many items. However, pen and paper are still retaining their place amid the technological changes that are taking place. For those who still prefer the feel of holding a pen in hand and writing on a paper, smart pens are a great option. No doubt, the process of taking notes on the paper and then typing them on the computer later, is time-consuming as well as a monotonous task to do. And one has to play the role of multi-tasker—listening, understanding and taking handwritten notes simultaneously, which have high chances of missing out on important things.

Thanks to smart pens, all these issues of taking notes with a regular pen, is a thing of past now. This piece of tech has brought a significant transformation and changed the dynamics of note-taking. It has made it much easier to take smart, fast and easy notes, and to maintain files in an organised and reliable way. The pen records everything, whatever you write, scribble or draw,

not only on the paper, screen, tablet, etc, but even in the air and digitises it by uploading it to your computer/smartphone.

How does it work?

A smart pen is a high-tech writing tool that records natural handwriting notes and stores the data on the memory chip of the pen. It comes with sensors that intelligently capture what you write on the note, stroke by stroke. But a smart pen requires a special paper that comes in notebook form. Each sheet has a grid of thousands of microdots that make the page more interactive and

engaging. At the bottom of the page, it displays interactive icons where you can choose functions like recording or pausing audio, or placing bookmarks as per your convenience.

When handwritten notes are converted into digital characters, the texts can be changed using the edit option tool. It allows transmitting the user's handwritten notes or drawings to other devices such as Android or Apple devices, printers, modems, desktop computers, etc, for different applications. Besides, it has features that make it easy to share notes or file transfer via LAN, email, and instant
