

TOP SMARTWATCHES WITH CUTTING-EDGE FEATURES UNDER ₹ 10,000

Nijhum Rudra

Technology has become an important aspect of our lives and has changed our daily schedules in various ways. Most importantly, technology has become smart these days. As an example people can switch off their lights using their smartphones. Not only that, people can even command their speakers to listen to their favourite music via AI-enabled smart assistants such as Siri, Cortana and Alexa. Mobile phones are one of the first gadgets that turned smart and subsequently, other gadgets followed equipped with the Internet of Things (IoT).

Along with smartphones, wristwatches are now coming up with numerous smart features. Initially, it was believed that smartwatches would get doomed, but slowly these have gained massive traction among people. Smartwatches with premium features were very expensive and hence companies came up with an alternative, known as smart band. But, smart bands failed to capture the market as compared to smartwatches. Therefore smartwatch makers are now launching numerous budget-friendly devices to capture the market.

A smartwatch not only tells you time, but also plays the role

of your travel buddy. James L. McQuivney, an analyst at Forrester Research described smartwatch as, "Someone who knows more about what you need than you do." But, before buying a smartwatch, consumers should know what are the important things and features they should look for. A few tips are given below.

Check OS and device compatibility. This particular feature is very important to look for because smartwatches are like your companions. There are various smartwatches such as Samsung's Tizen-powered Gear S3 and Gear Sport that are compatible with various smartphones, both Android and iOS, but watches such as Google's Wear OS work better with Android. When Android-compatible watches are linked to iOS, many features such as direct connection to Wi-Fi and apps addition aren't available. Hence, always check your device's OS compatibility.

Types of display. Generally, the display of a smartwatch is LCD or AMOLED, or e-ink. Watches with e-ink display are extremely easy to read even during a full sunny day because it is an e-paper display. LCD or AMOLED display consumes more battery power but is coloured. It is brighter, which causes a bit of trouble while viewing apps and images in sunlight.

Interface. Interface of smartwatch can also be of two types—buttons and touchscreen. Both come with their own pros and cons. It is a bit easier to navigate with a touchscreen, but can be difficult to select small items on the display. On the other hand, the buttons assure preci-

sion, but are time-consuming during navigation.

Additional measures. While buying your watch, check the rating; hybrid watches with digital as well as analogue display offer more battery life, but these don't have touchscreens. You will also have to check the clasp or buckle of the watch to see whether it is easy to use or swap. If you are a fitness freak, check whether the watch you are buying has GPS and heart rate sensors or not. Many smartwatches are available in the market without these two important features.

Now, let's find out some of the latest top-notch smartwatches available in the market

Honor watch magic. The watch is crafted from true stainless steel and is quite durable and sturdy. The watch

appears with a 3cm AMOLED coupled with a resolution of 390 × 390 pixels, rounding to a pixel density of 326ppi. It has a capacitive touch display, which is quite bright, radiant and offers stupendous readability. Most importantly, the watch also comes with a unique feature of measuring metabolism via a dynamic heart rate sensor that can be
