

AUTOMOBILE

Designers are already thinking outside the box, by reinventing the car interior with the help of smart surfaces. Inside the automobile, integrated sensing and illumination technology has been utilized to enhance functionality and aesthetics as well as occupant safety and comfort. Pressure sensors in passenger seats can detect the weight of a child and turn off the airbag, protecting them from serious injury.

A capacitive sensing system can be discreetly integrated into the steering wheel to help monitor whether the driver's hand is factually on the steering wheel. It allows for very precise monitoring of the hands-on/off status in the transition between the manual and automated driving modes.

GAMING DEVICES

The latest generations of controllers have included gadgetry like IR sensors, built-in voice commands, haptic feedback, variable pressure sensors, capacitive touch-screens for fingertip controls, and gyroscopic sensors & accelerometers to detect motion that help gamers to fully immerse themselves in the experience.

MEDICAL DEVICES

Unique properties of the Force Sensors (FSR) such as the requirement of small surface area for activation, low cost, flexibility, and high tolerance to temperature, chemicals, and moisture make it an ideal sensor material for biomedical applications, wherein force measurement is required. Some of the applications include robotics surgery, drug delivery devices, the solution to curb bedsores (bed sensors), etc.

WEARABLES & IOT

Today's flexible sensors can monitor a variety of biomarkers and physiological parameters such as temperature, heart rate, glucose, lactate, electrolytes, calcium, heavy metal ions, pulse oximetry (blood oxygen saturation), and the electrical activity in the heart (electrocardiography) & the brain (electroencephalography).

Hands-off Detection Sensors

Car Seat Occupancy Sensor & Heater

Wearable Health Patch

Solutions developed by Classic Stripes include,

- 1. Flexible Piezoresistive sensing solutions for a variety of applications which include**
 - Standard Force/pressure Sensitive Resistors (FSR)
 - Large & small format force/pressure sensors
 - Integrated Position & Pressure resistive touch sensing (On-off switches, Linear and circular scrollers) - Suitable for touch interfaces requiring gloves, etc.
 - Touch sensing wall switches
 - Seat occupancy detection sensors
 - Temperature detection sensors (PTC)
- 2. Ultra-thin & Flexible Electroluminescent (EL)/LED solutions which include**
 - Illuminated Decals (Automotive)
 - Illuminated 3D badging (Automotive)
 - Illuminated backlight cluster dial (Automotive)
 - Illuminated seat logos, sill plates (Automotive)
 - Multi-channel programmable Signage
- 3. Capacitive sensing solutions for a variety of applications which include**
 - Instrument/Device Touch Panels

The possibilities and applications are truly exciting!

Please get in touch with us to learn how we can integrate our products to make your products better.
