optimal electronic products.

Equipped with design cloud simulation services, PathWave ADS 2021 software reduces simulation time, increases simulation test coverage, and provides access to scalable hardware resources in the cloud.

PCB design software

Number One Systems has announced the release of Easy-PC version 24, having over fifty new enhancements. With

these developments, Easy-PC delivers performance in schematic capture and printed circuit

board (PCB) layout normally associated with products at ten or even twenty times the price.

As per the company, the system has been designed for easy and simple learning so that board designers can be productive within a short amount of time (new customers have reported they are producing their first board within hours of installing the software).

Application software kit

Renesas Electronics has extended the RX Functional Safety solution, with the

release of its Functional Safety over EtherCAT (FSOE) Application Software Kit, which supports functional

safety on EtherCAT from a semiconductor manufacturer.

It is a solution for industrial automation applications that reduces the complexity of IEC 61508 SIL3 certification, an international standard for functional safety.

The new FSOE software is based on the FSOE standard published by the EtherCAT Technology Group. The company states that the developers can obtain an FSOE protocol stack in addition to an RX microcontroller (MCU) with functional safety support and the software all in a single package, thus speeding up the

development of industrial equipment incorporating FSOE.

ENTERPRISE-CLASS PRODUCTS

Alloy for automotive applications

Indalloy 292, a new high-reliability alloy, has been launched by Indium Corporation. The product's press release promises an advanced lifetime, reliability, and high-performance.

The new alloy addresses the increased temperatures in many automotive applications.

It also offers outstanding printability, stability, and enhanced SIR performance when paired with Indium8.9HF solder paste series, which is a no-clean, halogen-free solution, designed to produce low-voiding, enhanced electrical reliability, and improved stability during the printing process for high-reliability automotive electronics.

AI-based smart camera

ADLINK Technology has launched a new NEON-1000-MDX smart camera series together with its smart pallet solution, combining the Intel Movidius Myriad X VPU, which supports inference models optimised by OpenVINOTM and ADLINK's Edge Vision software to add AI-based machine vision into existing environments easily and quickly.

The all-in-one solution allows machine vision experts and developers to build, test and deploy machine learning (ML) models faster while giving IoT solution teams and system integrators the tools to connect, stream, and automate machine vision work.

The Intel Movidius Myriad X VPU (vision processing unit) optimises ML models and provides high AI computing power. By eliminating the complex integration of sensor modules, cables, and VPU modules, the NEON-1000-MDX smart camera simplifies the machine vision deployment process.
